SCHOOLS.

Preliminary information and schedule, 1. Schools and their classification, 5. Buildings and grounds, 11. Teachers, number and their classification, 15. Pupils, enrollment and attendance, 19. Conclusion and school funds, 23.

GENERAL TABLES.

	Page.
Table 1.—Number and percentage of schools, by provinces and subprovinces	29–30
Table 2.—Number of schools classified according to character of instruction, by provinces and subprovinces	32–33
Table 3.—Number of schools classified according to degree of instruction and character of schools, by provinces, subprovinces, and municipalities	34–71
Table 4.—Number of schools classified according to the language in which the greater part of the instruction is given, by provinces and subprovinces	72
Table 5.—Number of schools classified according to the language in which the greater part of the instruction is given, by provinces, subprovinces, and municipalities	73–89
Table 6.—Number of vocational schools, by provinces and subprovinces	90–91
Table 7.—Number of vocational schools classified by provinces, subprovinces, and municipalities	92–97
Table 8.—Number of schools classified by their location and time of session, by provinces and subprovinces	98–99
Table 9.—Number of schools classified by their location and time of session, by provinces, subprovinces, and municipalities	100–127
Table 10.—Number of municipalities, barrios, townships, etc., having and not having schools, by provinces and subprovinces	128–129
Table 11.—Classification of schools according to the source of funds, by provinces and subprovinces	130
Table 12.—Classification of schools according to the source of funds, by provinces, subprovinces, and municipalities	131–146
Table 13.—Classification of sectarian schools, by provinces and subprovinces	147

Page.

Table 14.—Classification of sectarian schools, by provinces, subprovinces, and municipalities 148–156
Table 15.—Number of teachers classified by grade and religious affiliation of schools, by provinces and subprovinces 158–161
Table 16.—Number of teachers classified by grade and religious affiliation of schools, by provinces, subprovinces, and municipalities 162–197
Table 17.—Number and percentage of teachers classified by grade, by provinces and subprovinces 198–199
Table 18.—Number of teachers classified by sex and citizenship, by provinces and subprovinces 200–201
Table 19.—Number of teachers classified by sex and citizenship, by provinces, subprovinces, and municipalities 202–227
Table 20.—Number of teachers classified by academic qualifications and religion, by provinces and subprovinces 228–229
Table 21.—Number of teachers classified by academic qualifications and religion, by provinces, subprovinces, and municipalities 230–247
Table 22.—Number of teachers classified by citizenship and religion, by provinces and subprovinces 248–249
Table 23.—Number of teachers classified by citizenship and religion, by provinces, subprovinces, and municipalities 250–276
Table 24.—Classification of public schoolhouses according to materials used and value thereof, by provinces and subprovinces 277–278
Table 25.—Classification of public schoolhouses according to materials used and value thereof, by provinces, subprovinces, and municipalities 279–305
Table 26.—Classification of public schoolhouses according to ownership and value, by provinces and subprovinces 306–307
Table 27.—Classification of public schoolhouses according to ownership and value, by provinces, subprovinces, and municipalities 308–333
Table 28.—Classification of private schoolhouses according to materials used and value thereof, by provinces and subprovinces 334–335
Table 29.—Classification of private schoolhouses according to materials used and value thereof, by provinces, subprovinces, and municipalities 336–350
Table 30.—Classification of private schoolhouses according to ownership and value, by provinces and subprovinces 351–352
Table 31.—Classification of private schoolhouses according to ownership and value, by provinces, subprovinces, and municipalities 353–368
Table 32.—Area and value of public school grounds occupied by public school buildings, by provinces and subprovinces 369–370
Table 33.—Area and value of public school grounds occupied by school buildings, by provinces, subprovinces, and municipalities 371–398
Table 34.—Area and value of public school grounds occupied for school gardens, playgrounds, etc., by provinces and subprovinces 399–400

Page.

Table 35.—Area and value of public school grounds occupied for school gardens, playgrounds, etc., by provinces, subprovinces, and municipalities 401–411

Table 36.—Area and value of private school grounds occupied by private school buildings, by provinces and subprovinces 412–413

Table 37.—Area and value of private school grounds occupied by school buildings, by provinces, subprovinces, and municipalities 414–427

Table 38.—Area and value of private school grounds occupied for school gardens, playgrounds, etc., by provinces and subprovinces 428

Table 39.—Area and value of private school grounds occupied for school gardens, playgrounds, etc., by provinces, subprovinces, and municipalities 429–431

Table 40.—Number of pupils classified by sex, citizenship, tuition, and boarding, by provinces and subprovinces 432–433

Table 41.—Number of pupils classified by sex, citizenship, tuition, and boarding, by provinces, subprovinces, and municipalities 434–459

Table 42.—Annual enrollment, 1918–1919, classified by grades, by provinces and subprovinces 460–461

Table 43.—Annual enrollment by grades, by provinces, subprovinces, and municipalities 462–477

Table 44.—Annual enrollment by grade and sex, by provinces and subprovinces 478–481

Table 45.—Annual enrollment classified by grade and sex, by provinces, subprovinces, and municipalities 482–531

Table 46.—Number of public and private pupils classified by grade, by provinces and subprovinces 532–533

SCHOOLS.

By ALEJANDRO ALBERT,
Former Assistant Director of the Census.

The forms for the enumeration schedules were prepared in accordance with the plan adopted by the Director of the Census of 1918, after mature deliberation with the Assistant Directors, Schedule 3, inserted below, being the questionnaire that was to be filled out by the enumerators in charge of gathering the information concerning schools and other educational institutions in the Philippine Islands.

12. In what language or languages is the greater part of instruction given? En qué idioma o idiomas se da la mayor parte de la enseñanza?

13. Classify the total yearly enrollment for current school year in the following tables. Clasifíquese el total anual de matriculados en el año corriente en las siguientes tablas.

	a				b				
					Pay Students. Alumnos de pago.		Free Students. Alumnos gratis.		
	Males. Varones.	Females. Hembras.	Total.	Citizenship. Ciudadanía.	Males. Varones.	Females. Hembras.	Males. Varones.	Females. Hembras.	Total.
Residents of place. Residentes				Filipinos					
Have taken oath. Medio ciudadanos				Americans. Americanos.					
Do not have. No tienen									
Total				Total.					

Note. The total of [illegible] must equal the total of [illegible] and must be the total yearly enrollment for current school year. Nota. El total del cuadro [illegible], debe [illegible] y ambos, igual al total anual de matriculados en el año corriente escolar.

14. Date of opening session. Fecha de apertura. Date of closing session. Fecha de clausura.

15. What was the average daily attendance for last school year? Que era el promedio de asistencia diaria el curso pasado?

Males. Varones. Females. Hembras. Total.

16. What was the number of days of school of last school year? Cuantos días de clase hubo durante el último año escolar?

It will be noted that this schedule does not essentially differ from the one used for the same purpose in taking the Census of 1903. A few details have been added, however, which it was considered advisable to introduce for a better and more complete presentation of this important subject-matter of the Census, such being, for instance, the data referring to buildings and lands, to the academic qualifications and religion of the teachers and professors, to the class of instruction given in the schools, etc.

The work of enumeration in connection with said Schedule 3 was entrusted to teachers proposed by the Bureau of Education, which had selected the most competent and best acquainted with each locality for appointment as enumerators.

As soon as the schedules had been returned to the Census Office, with the questionnaire properly answered, they were revised and compiled by a division especially organized for this purpose. Such corrections or explanations as were found necessary in the course of the compilation were made by the division superintendents of schools of the respective provinces who, though they did not receive any salary or allowance for this special work, performed it in a very satisfactory manner.

Upon the completion of the compilation, the result was embodied in condensed form in the statistical tables which will be found in the proper place in this volume.

The data contained in those tables served as a basis for the preparation of the present report which, for the sake of clearness, has been divided into several chapters bearing the following titles:

I. Schools.
II. Buildings and Grounds.
III. Teachers.
IV. Pupils.

I. SCHOOLS.

Classification—Total Number of Public and Private Schools—Sectarian and Non-sectarian—Day Schools and Night Schools, or Both—Primary, Intermediate, Secondary, Vocational, Professional, and Superior Schools, and Universities—Distribution and Location—Language in Which Instruction is Given—Funds Out of Which Maintained.

There are at present in the Philippine Islands 6,510 educational establishments, including schools, colleges, and universities. Of this number, 4,785 are public schools and 360 non-sectarian private schools; the remaining 1,365 are classified as sectarian or religious schools. Comparing the results of the Census of 1918 with those of the Census of 1903, which gives the total number of public, private, and religious schools then existing as 2,962, we see that there has been a great increase in the number of schools in the Philippine Islands, amounting to 119.8 per cent, or 7.9 per cent per annum, during the fifteen years that intervened between the taking of the last Census and that of the present one.

Analyzing the details of this astonishing increase, we find that in 1903 there were 1,633 public schools, while there are at present 4,785, which means that the number of schools maintained out of public funds has almost quadrupled in the course of fifteen years. On the other hand, the number of non-sectarian private schools has decreased 64.1 per cent, it having gone down from 1,004 to only 360. The cause of this decrease is the following: During the first years of the establishment of American sovereignty in these Islands, the Filipino people hastened to satisfy their great desire for instruction, and even in the remotest provinces, schools and educational establishments were founded which were all useful in their own way. Subsequently, as the present system of official instruction continued to develop, and after the Department of Public Instruction had issued its regulations concerning the official recognition of diplomas and certificates issued by private schools, and especially after the promulgation of Act No. 2706, making it obligatory for the Secretary of Public Instruction to inspect and recognize private

schools and colleges, many of these schools, which were unable to attain to the standard required in order to give official validity to the certificates and diplomas issued by them, were eliminated. There remains at present but a very small number of private schools which are not recognized.

There has been an increase in the number of the sectarian or religious schools during the lapse of time above referred to, 1,365 being enumerated when the present Census was taken, as against 325 for the Census of 1903. This is due to the circumstance that the parish priests of the Catholic Church have made it a point to establish their own parochial schools. Moreover, religious instruction is given in the majority of the private schools.

Of the 6,510 schools, 6,402 have day classes, 39 are night schools, and the remaining 69 have both day and night classes. The largest number of night schools is in Manila, for the reason that there the biggest nucleus of laborers and employees is to be found, for whose benefit these night schools are held. The same is the case with the schools having both day and night classes. Tables 8 and 9 give the locations of these schools.

According to the kind of instruction given in them, the schools are divided into 5,720 primary, 508 intermediate, 87 secondary, 178 vocational, and 15 superior schools, and 2 universities, the particularities referred to in the preceding paragraph being stated for each group, as will be seen, in Table 2 by provinces and subprovinces, and in Table 3 by municipalities.

It is not possible to furnish an exact comparison, covering all details, of these results with those of the previous Census. Under the military government of occupation as well as later, under the direction of Dr. Fred. W. Atkinson, who assumed the office of superintendent of public instruction in the year 1900, under the Philippine Commission, the policy was followed of respecting in so far as this was prudent the existing state of affairs where the schools were concerned, it being endeavored to improve them gradually. The tables of the Census for 1903 therefore contained only the classifications "Primary instruction," "Secondary instruction," and "Superior instruction," in making reference to the kinds of instruction then given. In order not to omit this portion of the comparative examination, it has been considered necessary to group the results of the school statistics of the present census in accordance with the nomenclature used in the last, which gives us the following table:

Recapitulation of the Statistics.

	Census of 1903.	Census of 1916.
Total number of schools	2,962	6,510
Public	1,633	4,785
Private	1,004	360
Religious or sectarian	325	1,365
Primary and Intermediate	2,858	6,228
Public	1,593	4,599
Private	951	313
Religious or sectarian	314	1,316
High schools	102	87
Public	40	48
Private	52	14
Religious or sectarian	10	25
Colleges and Universities	[1] 2	15
Vocational		178
Universities		2

In order to harmonize the nomenclature of the groups according to the class of instruction, as used in the recapitulation of school statistics of the previous Census, with the results of the present Census, we have consolidated the totals of the primary and intermediate schools in the group "Primary Instruction" and placed the 87 schools of our Table No. 2 in the group of "High School." (As the recapitulation of the Census of 1903 makes no mention of the vocational or special schools, of which we have at present 178, it has not been possible to include these in the present recapitulation of statistics.) As regards the results of the present Census with respect of the college and university group, properly speaking, we have separated these and not included them in the total of the superior instruction group.

It appears from this statistical résumé of the number of the schools that the average number per province was 72 and that per municipality 3, according to the Census of 1903. At present these averages are 118.3 per province and 8.1 per municipality. On the other hand, from the school statistics of the Census of 1903 we find that 55 per cent of the schools were public schools at that time, while the present Census shows that the schools supported out of public funds represent over 73 per cent of the total number.

The number of schools of primary instruction, which in 1903 constituted 96.5 per cent of the total number of schools, now forms a somewhat smaller proportion of the total, as it does not exceed 95.7 per cent. The public, private, and religious

[1] Includes university.

schools of secondary instruction or high schools, which then numbered 102 and consequently represented 3.4 per cent of the entire number of schools, now constitute but 1.4 per cent of the total number, due to the regulations of the Department of Public Instruction concerning the official recognition of the certificates and diplomas issued by private schools.

Table No. 6 shows that we have in the Philippine Islands 178 vocational schools, of which 97 are agricultural, 13 business, 9 domestic science, 2 fine arts, 1 optometry, 15 music, 1 nautical, 1 normal, 6 nurses' training, 6 seminary, and 27 art and trade schools, scattered throughout the several provinces of the Archipelago. In this connection it will be observed that the largest number of agricultural schools is to be found in Agusan, Mindanao, where there are 26; next comes Davao, with 19.

Attention is invited to the fact that many of the vocational schools were enumerated in the present Census as primary or intermediate schools giving general instruction only, hence the apparent discrepancy betwen the number of agricultural schools shown on Table 6 and the larger number of these schools really existing, as shown by the report of the Director of Education for the year 1918, which gives the aggregate number of agricultural schools in all the provinces as 138. No doubt a large number of settlement farm schools have been enumerated as primary schools, without making any mention of the elementary agricultural training given to the pupils.

The business schools are located not only in Manila, but also in several provinces, such as Benguet and others, rather distant from the capital.

As regards the domestic science schools, while only 9 have been enumerated, attention must be called to the fact that this subject is taught in nearly all the intermediate schools as part of the curriculum for girls. The 9 schools reported by the enumerators are exclusively domestic science schools.

Table No. 6 shows only one normal school, namely, the Philippine Normal School in Manila, but here we must likewise remark that there are schools of this kind in the Provinces of Albay, Iloilo, Pangasinan, etc., where normal classes are taught in conjunction with high-school courses. Moreover, in a few of the remote provinces, such as Abra, Sulu, and Palawan, and in Mindanao, normal classes are also held in certain intermediate schools, which will cease giving this special instruction as soon as proper normal schools shall have been established at Laoag, Ilocos Norte, and in Cebu, Iloilo, Albay, Pangasinan, Zamboanga, Samar, and Leyte. Several sums, aggregating over one million

pesos, have been appropriated at the last three sessions of the Philippine Legislature for the construction of buildings for these normal schools.

As regards the art and trade schools, of which 27 appear on Table No. 6, to which we have referred several times, we must invite attention to the fact that doubtless several schools which should have been enumerated as such have been included in the number of the intermediate schools, as this is the base of the instruction given in them. As there are art and trade schools in all the provinces, and some provinces even have them in more than one municipality, we are positive that their real number is over double the number given in Table No. 6. Comparing these data with those of the Census of 1903, it is not necessary to enlarge upon the great progress which the Filipino people has made since then so far as the number and quality of these vocational schools is concerned, considering that that Census makes mention of but three: one art and trade school, one nautical school, and one normal school.

The number of schools of "superior instruction," of which the Census of 1903 mentioned only 2, one just established at Calivo, Province of Capiz, and the other the old University of Santo Tomas, is now 17. This number not only includes the two universities, properly speaking, that is, the University of the Philippines and the secular University of Santo Tomas, but also 15 others, which appear in our Table No. 2 under the college or superior group.

In the comments to the last Census, attention was called to the fact that in 38 of the 50 provinces and subprovinces then existing, the aggregate number of the public schools was greater than that of the private and religious schools. This is also the case at present, but the proportion is much larger. In some provinces there were only public schools, the same as at present. In Nueva Vizcaya there were neither private nor religious schools, and the same is the case now. In Romblon there was only one school, while there are 13 at present. In Mindoro and Surigao there were only 2, while now the same provinces have 62 and 110 schools, respectively. There were but 3 schools in each of the Provinces of Samar and Masbate, which at present maintain 186 and 17, respectively. On the other hand, in Abra, Albay, Ambos Camarines, Antique, Batangas, Bohol, Cavite, Iloilo, Manila, Sorsogon, and Tayabas, the combined number of the private and religious schools was greater than that of the public schools, which is not the case now, because in the prov-

inces named there are at present 1,314 public, 117 private non-sectarian, and 560 religious or sectarian schools, which shows that in these provinces, the same as in the others, the people have realized the advantages of the official curriculum. This is true to such an extent that the people show real enthusiasm in coöperating with the Government in the raising of funds for the maintenance of the official schools and the erection of buildings for the same.

Table No. 8 shows that 34.8 per cent of the 6,510 schools at present existing are located in the towns and 65.2 per cent in the barrios. This notwithstanding, over 75 per cent of the barrios are still without schools.

The study of the English language, which was generally, but not completely, accepted during the first years of the establishment of the American rule in these Islands, when it was directed that the instruction in the public schools should be given in English, has found a constantly growing acceptance, and it can be affirmed that the knowledge of this language has been diffused, especially among the masses, to such a degree that few among the young generation of Filipinos do not speak it with more or less perfection. This is corroborated by the data in Table No. 5 of the present Census, which shows that in 5,135 schools the instruction is given in English and in 448 only in Spanish, and that there are 90 educational establishments where it is given in both English and Spanish. The 837 remaining schools are unclassified.

In order to complete this part of the data concerning schools, Table No. 10 shows the number of the municipalities, municipal districts, townships, barrios, and *rancherías* or settlements which have schools, and those which have not any.

Table No. 11 shows the origin of the funds with which the schools are maintained. According to it, 60.9 per cent are maintained with public funds, 6.3 per cent with parochial funds, 15.1 per cent with receipts from matriculation fees, 7.7 per cent with donations, and the remaining 10 per cent with other funds. In Table No. 12, the specification of the various items is made by municipalities.

II. BUILDINGS AND GROUNDS.

Public Buildings and Buildings Rented for School Purposes—Materials of Which They are Constructed, and Value Thereof—Rentals Paid for Rented Buildings—Area, Ownership, and Value of the Land Occupied by the Public School Buildings—Area, Ownership, and Value of the Land Occupied by the Same for Gardens, Athletic Grounds, Etc.—Private Buildings Rented or Ceded Free of Charge—Rentals Paid for Rented Buildings—Area, Ownership, and Value of the Land Occupied by Private Buildings Used as Schoolhouses, Gardens, Athletic Grounds, Etc.

It has not been possible to establish with certainty the number of public buildings used for school purposes at the time of the change of sovereignty in this Archipelago; but it is believed that there were about 1,500 of them.

When the Census of 1903 was taken, 3,461 school buildings were enumerated, of which 1,085 were public schools of light materials. The present Census gives the total number of school buildings as 7,554; of these, 1,941 are of strong materials, 3,207 of mixed materials, and 2,406 of light materials.

Following the same plan as in the preceding chapters, we insert below a comparative table showing the statistical data in this respect for both Censuses.

Resumé of the statistics on school buildings.

	Census of 1903.	Census of 1918.
Total number of schoolhouses	3,461	7,554
Distribution:		
Public	1,970	5,920
Mixed and light materials	1,085	4,395
Strong materials	885	1,525
Private and religious	1,491	1,634
Mixed and light materials	1,217	1,218
Strong materials	274	416

According to Table No. 24, the 5,920 public school buildings are valued at ₱17,380,974. They include 1,525 schoolhouses of strong materials, worth ₱14,917,578; 2,653 of mixed materials, worth ₱2,128,320, and 1,742 of light materials, worth ₱335,076. The table referred to shows the location of these schoolhouses by provinces and subprovinces, and Table No. 25 shows the same also by municipalities. From these data we

see that the average value of the strong-material schoolhouse is about ₱10,000; that of the mixed-material building ₱800, and that of the light-material building, approximately ₱200.

The strong-material schoolhouses represent 25.8 per cent of the total number, the mixed-material buildings 44.8 per cent, and the light-material buildings 29.4 per cent.

Tables Nos. 26 and 27 show that of the schoolhouses in which official instruction is given, 4,622 are buildings owned by the Government, worth ₱15,045,566, and 815 are rented buildings, estimated to be worth about ₱1,677,273, for which an annual rental aggregating ₱176,305 is being paid. The remaining 483 school buildings have been lent or ceded free of charge; their value is ₱658,135. These data show that 78.1 per cent of the schoolhouses in which official instruction is given are Government property, while the remainder are either rented or ceded gratuitously, the percentages being 13.8 per cent and 8.1 per cent, respectively.

The data of the table referred to show, further, that the average rental paid to the owners of the rented schoolhouses on the date when the present Census was taken, represented an interest of less than 16 per cent, which is quite a reasonable figure, considering the high prices of materials and labor which have been prevailing since the great war just ended.

Tables Nos. 32 and 33 show the area and value of the public school land occupied by the buildings, specifying which are Government property, which rented, and which loaned. It appears from these statistical data that of the 53,331.357 hectares of land occupied by public-school buildings in the Philippine Islands and worth ₱5,604,059; 49,938,205 hectares, valued at ₱4,787,779 are Government property; 1,710,410 hectares, valued at ₱412,082, are rented, the annual rental paid for them aggregating ₱2,109; and, lastly, 1,682,742 hectares, estimated to be worth ₱404,198, have been ceded free of charge by their owners.

Tables Nos. 34 and 35 contain statistics concerning the area and value of the land occupied by the public schools as gardens and athletic grounds. The total area of the land set aside for these purposes is 7,543,804 hectares and its value ₱613,843.

The distribution of these totals in accordance with the classification made in the two tables referred to shows 6,549,013 hectares to be Government property and worth ₱533,779; 72,419 hectares, worth ₱7,310, to be rented for an aggregate annual

rental of ₱576, and the remaining 922,372 hectares, worth ₱72,754, to be loaned or ceded gratuitously.

Tables Nos. 28 and 29 deal with the private school buildings, which are classified according to construction material and subprovinces, and in the latter table also by municipalities. It is shown that of the 1,634 private schoolhouses, the value of which is estimated at ₱8,526,644; 416, worth ₱8,223,474, are of strong materials; 554, worth ₱240,332, of mixed materials, and 664, worth ₱62,838, of light materials.

In tables Nos. 30 and 31, these private schoolhouses are also classified according to whether they are the property of the school, rented by the same, or ceded to it gratuitously; their values are also shown. It appears that of the 1,634 private schools, 1,171 occupy buildings of their own, estimated to be worth ₱7,630,756; 106 are in rented buildings, worth ₱584,257, the aggregate annual rentals of which amount to ₱92,902; and the remaining 357 are in buildings loaned or ceded gratuitously and worth ₱311,631.

Tables Nos. 36 and 37 show the area and value of the land of the private schools occupied by the buildings thereof, it appearing that the total area is 11,270,167 hectares and that the aggregate value of the land so occupied is ₱2,631,933. Analyzing these totals, we find that 10,663,157 hectares, worth ₱2,269,058, are owned by the schools; that only 145,405 hectares, valued at ₱230,150, are leased, at an aggregate annual rental of ₱606, and that 461,605 hectares, worth ₱132,725, have been loaned or ceded gratuitously.

Tables Nos. 38 and 39 deal with the area and value of the land occupied by the private schools as gardens, athletic grounds, etc. It appears that the total area is 398,034 hectares and the total value, ₱509,869; 368,811 hectares, worth ₱473,807, are owned by the schools, and 9,193 hectares, worth ₱32,791 are rented, the aggregate annual rentals paid being ₱896; and 20,027 hectares, worth ₱3,271, are land ceded or loaned gratuitously. Attention is called to the fact that private schools exist in only 18 of the 55 provinces and subprovinces of the Philippine Islands, while there are public schools in every one of them. It must also be mentioned that in the aforesaid tables of the present Census the figures showing the area and value of the private schoolhouses and the land belonging to the same include both the non-sectarian and the religious or sectarian private schools.

Recapitulating the data concerning the increase in the number of school buildings, we see that according to the comparative statement at the beginning of the present chapter, the percentage of the total increase is 118.3 per cent, of which 80.9 per cent belong to the mixed- and light-material buildings; and 19.1 per cent to the strong-material buildings; in other words, the total increase of 118.3 per cent is distributed among 95.7 per cent of the mixed- and light-material buildings and 22.6 per cent of the strong material buildings.

Upon detailing these data in accordance with the other statistical data contained in the comparative statement referred to, we find that, so far as the public school buildings of the Government are concerned, there has been a total increase of 200.5 per cent, of which aggregate 16.2 per cent belong to the strong-material and 83.8 per cent to the mixed- and light-material buildings. The large percentage of the latter is due to the fact that many barrio schools have been built since the passage, in 1907, of the Gabaldon Act, the first law passed by the Philippine Assembly, which provides funds for the construction of barrio schools, in the interest of the residents of said barrios. Classifying this 200.5 per cent increase in accordance with the construction material, we find that the strong-material buildings have increased 32.5 per cent and the mixed- and light-material buildings 168 per cent.

As regards the private and religious schools, the increase in the number of buildings is only 9.6 per cent, all of which appertains to the strong-material buildings, seeing that the number of mixed- and light-material buildings has only increased by one.

III. TEACHERS.

Total Number of Teachers, Specifying the Several Grades Taught by Them—Percentage of Number in Each Class—Classification by Sex, Citizenship, Religion, and Academic Qualifications.

According to the last Census, there were at that time 5,925 teachers in the Philippines, which makes an average of 2 per school. Now the number of teachers enumerated is 18,134, which, considering the number of schools shown by the present Census, gives an average of nearly 3 teachers per school, although the number of schools is now more than double what it was at that time.

	Census of 1903.	Census of 1918.
Total number of teachers	5,925	18,134
In public schools	3,667	14,330
In private schools	1,657	770
In religious or sectarian schools	601	5,034
Distribution:		
In elementary schools (primary and intermediate)	5,426	16,057
Public schools	3,506	13,035
Private schools	1,456	545
Religious or sectarian schools	464	2,477
In high schools	434	873
Public schools	161	573
Private schools	191	100
Religious or sectarian schools	82	200
In vocational or special schools		713
In colleges and universities	65	491
BY CITIZENSHIP AND SEX.		
Filipino teachers	4,898	17,172
Male	3,120	10,469
Female	1,778	6,703
American teachers	785	501
Male	551	234
Female	234	267
Spanish teachers	236	249
Male	133	183
Female	10	66
Others	6	212

A glance at Table No. 15 will show that, the same as in the comparative table of schools, the totals of the primary and intermediate columns have been grouped under "Elementary

"Others" include the 58 Chinese teachers and 26 [illegible] who are British subjects, classified in Table No. 18 of the present Census.

schools," and the same has been done with the figures of the columns appertaining to the college or superior and university instruction, which have been grouped under "Colleges and universities."

Of the 18,134 teachers and professors there were at the taking of the present Census, 79 per cent were in the public schools, 4.3 in the non-sectarian private schools, and 16.7 in the sectarian or religious schools. The same table also gives the percentage of the total number of these teachers employed in each class of schools, it appearing that 72.9 per cent of them were teaching in primary schools, 15.7 per cent in intermediate schools, 4.8 per cent in high schools, 3.9 per cent in vocational or special schools, 1 per cent in schools with superior courses, and 1.7 per cent in universities.

In 1903 there were 434 high-school teachers, which represents over 4 per school. In the public, private, and religious high schools there were, respectively, 161, 191, and 82 teachers. The public schools of this class therefore had a little more than 4 teachers per school; the private schools had somewhat less than that figure, and the religious schools had over 8 teachers per school. The two universities had 65 instructors. Inasmuch as the number of high schools enumerated in the present Census is only 87 and that of the teachers 873, we have an average number of 10 teachers for each high school. The three classes of high schools, as established in the present Census, have, respectively, 573, 100, and 200 teachers; consequently the average number of teachers is now 12 for each public school; 7 for each private high school, and 8 for each sectarian or religious high school.

These teachers are classified in Tables Nos. 18 and 19 according to sex and citizenship, and the respective data are likewise embodied in the comparative résumé of the statistics of 1903, above inserted.

As shown by the comparative résumé referred to, the increase in the number of teachers is in proportion to the great increase in the number of schools since the taking of the last Census. The increase in the number of professors of superior instruction is particularly noteworthy, as the proportion is 1 to 7 in comparison with the number returned by the Census of 1903, that is to say, there has been an increase of over 700 per cent in this class.

The present Census shows 60.5 per cent of the teachers to be males and 39.5 per cent females; consequently there has been a greater increase in the number of female teachers than in the

number of male teachers. The number of female teachers is, however, not higher than that of the male teachers, as is the case in America.

As regards citizenship, it will be noted that the increase in the number of the Filipino teachers has been proportional and uniform, it being due, rather than to the policy of filipinization, to the circumstance that the schools have been turning out the necessary material for teachers.

There has been a slight decrease in the number of American teachers and an increase in the number of teachers of foreign nationality, which includes the teachers of the Chinese schools that have been established in Manila, with similar curriculum as the public schools, but supported by funds raised by the Chinese colony of the Philippine Islands.

With reference to the figures embodied in Table No. 18, 94.7 per cent of the present total number of teachers are Filipinos, who, in the Census of 1903, represented only 82.7 per cent. The percentage of American teachers, on the other hand, has decreased 10.6 per cent; in 1903, 13.3 per cent of all teachers were Americans, while in 1918 this proportion amounted to only 2.7 per cent. As regards foreigners, the percentage of Spanish teachers has fallen from 4 per cent to only 1.4 per cent, while the number and consequently the proportion of the Chinese and English teachers have increased.

Classifying these data according to sex and nationality, we see that the present Census shows 61 per cent of the total number of the Filipino teachers to be males, while in the previous Census this proportion was 63.7 per cent, that of females being at that time 36.3 per cent and at present 39 per cent. Of the American teachers in 1903, 70.2 per cent were males and 29.8 per cent females, while the present Census shows 46.7 per cent of males and 53.3 per cent of females.

The same Table 20 classifies the teachers according to the religion they profess, showing 14,605 catholics, 1,676 protestants, 1,578 aglipayans, and 275 of other religions. In other words, 80.5 per cent of the teachers are catholics, 9.3 per cent protestants, 8.7 per cent aglipayans, and 1.5 per cent members of other religious groups. The details of these totals are given in Table 22 in the following form: of the total number of Filipino teachers, 82.2 per cent are catholics, 7.6 per cent protestants, 9.2 per cent aglipayans, and the remaining 1 per cent profess other religions. Of the total number of American teachers, 16.8 per cent are catholics, 70.3 per cent protestants,

and 12.9 per cent profess other religions. A comparison of these figures with those of the previous Census shows a great difference, because in 1903 there were only a few Filipino protestant teachers and a considerable number of the American teachers were catholics.

Table No. 20 classifies the teachers according to their academic qualifications, that is, according to the degrees held by them. It shows that of the 18,134 teachers and professors of the Philippine Islands, 29.9 per cent have an elementary instruction; 48 per cent a high school education; 3.1 per cent are graduates of colleges; 12.6 per cent have specialized in branches of the so-called vocational schools; 4.1 per cent are graduates of universities, and the remaining 2.3 per cent hold other degrees not specified, seeing that according to the statistics of said Table No. 20, 5,422 teachers are graduates of elementary schools; 8,706 of high schools; 567 of colleges; 2,281 of the various classes of vocational schools; and 738 of universities, while 420 hold degrees not classified.

IV. PUPILS.

Total Number of Pupils Enrolled, and Classification of Same by Sex, Citizenship, and Other Circumstances—Annual Enrollment in Public and Private Schools—Proportion of Pupils Enrolled to Population of School Age—Average Daily Attendance, by Grades and Sexes—Duration of School Year.

Table No. 40 of the present census shows that the total number of students in the Philippines was 789,046; of this number, 472,762 were males and 316,284 females. As regards citizenship, 785,627 were Filipinos, 747 Americans, 2,038 Chinese, and 634 belonged to other nationalities. The same table informs us that of this total, 117,120 were paying students, while the remaining 671,926 had enrolled free of charge.

In the following statement a comparison is made with the figures of the Census of 1903:

School statistics.

	Census of 1903	Census of 1918.
Number of pupils enrolled	356,385	789,046
Public schools	266,362	676,283
Private (non-sectarian) schools	63,545	112,763
Private (religious or sectarian) schools	26,478	
CLASSIFICATION.		
By sexes:		
Males	213,057	472,762
Females	143,328	316,284
By citizenship:		
Filipinos	355,157	785,627
Other nationalities	1,228	3,419
By conditions of enrollment:		
Paying students	58,374	117,120
Non-paying students	298,011	671,926
By class of instruction:		
Primary and intermediate schools	341,938	735,273
Distribution:		
Public schools	264,615	636,301
Private (non-sectarian) schools	56,495	98,972
Religious or sectarian schools	27,918	
High schools	14,011	27,954

Classification—Continued.

Distribution:		
Private (non-sectarian) schools	7,022	6,522
Religious or sectarian schools	2,242	
Public schools	4,747	21,432
Vocational schools	0	19,562
Colleges and universities	436	6,257

A simple examination of the above statistical data shows that there has been a great increase in the number of students since the year 1903, amounting to 432,661, or 121.4 per cent.

As regards the classification by sexes, it will be observed that the proportion between males and females has remained practically the same, since the Census of 1903 shows 59.8 per cent of male and 40.2 per cent of female students, while the same percentages for the present census are 59.9 per cent and 40.1 per cent, respectively.

With respect to citizenship, it will be noted that the Census of 1903 classifies the students merely into Filipino and non-Filipino students, the latter being grouped under "Other nationalities." For this reason it is not possible to make a comparison with the previous census of the figures regarding American, Chinese, and other students appearing in Table No. 40 of the present census. At all events, it is evident that the general increase is almost entirely due to the increase in the number of Filipino students, the increase in the total of the "Other nationalities" being relatively insignificant.

In 1903 there were 16.4 per cent paying and 83.6 per cent non-paying students, while the Census of 1918 shows a decrease in the proportion of paying students, which make up only 14.8 per cent of the total number, while the proportion on non-paying students has gone up to 85.2 per cent.

As regards enrollment in the primary schools, high schools, and colleges and universities, the proportions are almost the same as those of the Census of 1903, with small decreases for the primary schools, due to the fact that, as we said before, part of this contingent has been enumerated in the vocational schools. In the college and university group there is an increase which, although it appears small, is in reality big, in view of the great difference in the total number of students enrolled in these higher schools.

Table No. 46 refers to the various classes of instruction, classifying the students into those who attend the public and those who attend private schools. From these statistics we infer that the proportion of students attending the public schools has in-

creased considerably since the year 1903, because the Census of 1903 shows 76.5 per cent for the public primary schools and 23.5 per cent for the private schools, both sectarian and non-sectarian, while the Census of 1918 shows 86.6 per cent and 13.4 per cent, respectively. The increase in the number of students attending the public schools, as compared with that in the number of students attending the private schools, over the figures of the Census of 1903, was still higher so far as the high-school enrollment was concerned, seeing that the Census of 1903 reports 33.9 per cent for the public and 66.1 per cent for the private schools, while the present census shows 76.7 per cent and 23.3 per cent, respectively.

Table No. 48 shows that a little over one-fourth of the population of school age, that is, 27.8 per cent of the young people of both sexes, between the ages of 6 and 17 years, attended school during the school year 1917–1918. This percentage, compared with the figures of the Census of 1903, is in proportion with the development of the public and private instruction and is another proof of the great interest of the Filipino people in popular education, the best guarantee for its liberties and the greatest safeguard of its rights in a democratic government. There seems to be a conflict in this respect with the previous census, as the latter states that 37.5 per cent of the total number of children of school age attended school, but this figure is erroneous, because other tables of the Census of 1903 show that the schools were attended by only 356,385 children, and not by 811,715, which figure was by mistake used as basis for calculating the percentage above referred to. A statement to this effect is contained in the comments upon that part of the Census of 1903, in which we read that "it is probable that this total of 811,715 includes all persons that attended school since the establishment of the American public school system."

It will be observed in the provincial figures of the table referred to that Bukidnon, a special province recently organized and inhabited by non-Christians, has the smallest percentage of attendance, viz., 1.2 per cent, considering that out of 7,100 boys and girls of school age, but 84 attended school. The honor of having the highest percentage of school attendance belongs to the Batanes, a group of small islands at the north end of Luzon, with 88.7 per cent. Next comes Apayao, a subprovince inhabited by non-Christians, with a percentage of 76.9 per cent, which is 4.6 per cent greater than that of Manila, viz., 72.3 per cent.

It seems rather anomalous that according to Table No. 48, above referred to, only 763,227 out of a total of 2,746,202 boys and girls of school age attended school in 1917–1918, although in that year the total of the disbursements for school purposes, viz., ₱11,564,249.55, was larger than that of any of the preceding years. This impression disappears, however, when one considers that of that total of boys and girls, the majority had already attended some of the various kinds of schools for a longer or shorter period, because as the following table shows, a considerable percentage of the students of the primary, intermediate, and high-school classes, after attending school for from one month to half a year, drop their studies before the completion of the course, for one reason or the other. Out of the number of those who every year abandon their studies owing to the demands of life, the majority leave them for good, because they consider the degree of instruction acquired by them as sufficient for the demands of a proletarian life. For the reasons stated it can be affirmed that the 27.8 per cent enrolled students out of the 2,746,202 boys and girls of school age, reported by the present census, is very approximately the number of those who should attend school, and that that percentage can in no wise mean that the remaining 72.2 per cent do not care to be educated, because surely the majority of those three-fourths of the population of school age did not attend school that year because they had already received at school the degree of instruction they considered necessary, at least in order not to be included among the illiterates, as shown by our tables on population relative to "Degree of instruction."

Table No. 49 gives the average daily attendance of the schools according to class of instruction and sex. Here the percentage of males is greater than that of females in all classes of instruction. A comparison of the total number enrolled, 789,046, with the total average daily attendance, 619,953, shows that 78.6 per cent that is, a little over three-fourths of the students enrolled, attended school daily. This is rather satisfactory, especially if one considers the climatological conditions of the country and the circumstance that frequently the students have to walk a considerable distance in order to attend school.

Finally, Tables 51 and 52 give the averages of school days, annual attendance, and attendance for each school, as well as the duration of the school year, which is shown to have 176 school days. These tables are so clear and simple that we refrain from making any comment on the same.

The Filipino people are firmly convinced that the good democratic government which they have always desired for their national development must be founded upon the stable basis of the diffusion of a good educational system among the popular masses, and for this reason the improvement of our public instruction has always been considered as a matter of prime importance and has been the constant demand of the country. The historical fact that immediately upon the establishment of the Filipino Revolutionary Government at Malolos, towards the end of the year 1899, the dictatorial government enacted laws for the organization of a system of public instruction, bears out the statement above made. The first bill passed by the Philippine Assembly in 1907 provided for the appropriation of one million pesos for the extension of education to the remotest barrios, and it is a well-known fact that the native legislators have never been stinting in their appropriations of the necessary funds for this important item.

The success achieved by the orderly and methodical functioning of the modern University of the Philippines, the labors of which are shared by the secular institution known as the *Real y Pontificia Universidad de Santo Tomás*, has crowned the magnificent educational system of our Islands. Our system of public instruction is highly lauded by the governments of other countries of the Far East, who have sent committees here to study the same and Government students to matriculate in our schools. The Government of the United States, with the enthusiastic coöperation of the Filipino people, has implanted in this part of the world a system of instruction of the highest standard and of a truly democratic character, it being equally accessible to the poor and the rich of any race or social class.

The most difficult problem by which the Bureau of Education now finds itself confronted is how to accommodate the excessive number of students of both sexes who apply for matriculation. Although a goodly number of school buildings has been constructed, most of them of reinforced concrete and with all the modern sanitary appliances and otherwise well suited for their purpose, yet the problem of which we have spoken comes up every year on the date set aside for the matriculation of students, especially in Manila, the number of applicants for enrollment being much bigger than that which the public school buildings and buildings rented for school use can possibly accommodate. However, this difficulty will surely be overcome in the future, because, as we said before, the Philippine Leg-

islature does not stint the funds necessary for the improvement of the public instruction, as it is convinced that here, the same as anywhere else in the world, the public welfare and public safety require that especially the primary instruction be properly taken care of, until the number of illiterates shall have been reduced to the minimum.

To complete this work, we insert below a table of the sums expended for educational purposes by the Insular, provincial, and municipal governments, as well as those raised by public subscription, since the year 1903. These data have been furnished by the Bureau of Education and cover public schools only.

DEPARTMENT OF PUBLIC INSTRUCTION.

a No data. b Data for 6 months.

In order to show the rapid growth and progress of public education in the Islands, the following data which were gathered since the taking of this Census will be of interest. It will be seen that a big increase in the number of public schools has been registered within the last two years and it is safe to predict that further increases will be recorded in proportion to the appropriation available yearly. This steady growth is in a large measure due to the enactment by the Legislature of the so-called

Thirty-million Act (Act No. 2782) on December 6, 1918, which is as follows:

AN ACT APPROPRIATING THE SUM OF THIRTY MILLION SEVEN HUNDRED AND FIVE THOUSAND EIGHT HUNDRED AND TWENTY-FOUR PESOS FOR THE EXTENSION OF FREE ELEMENTAL INSTRUCTION TO ALL CHILDREN OF SCHOOL AGE.

Be it enacted by the Senate and House of Representatives of the Philippines in Legislature assembled and by the authority of the same:

SECTION 1. There is hereby appropriated, out of any funds in the Insular Treasury not otherwise appropriated, the sum of thirty million seven hundred and five thousand eight hundred and twenty-four pesos, or such part thereof as may be necessary, for the purpose of extending the facilities of free elemental instruction to all the children of school age of the Archipelago. Of this sum there shall be available for investment on the first of January, nineteen hundred and nineteen, the sum of seven hundred and thirty-five thousand pesos; on the first of January, nineteen hundred and twenty, the sum of three million nine hundred and nineteen thousand pesos; on the first of January, nineteen hundred and twenty-one, the sum of six million three hundred and five thousand four hundred pesos; on the first of January, nineteen hundred and twenty-two, the sum of eight million seven hundred and ten thousand four hundred and forty pesos; and on the first of January, nineteen hundred and twenty-three, the sum of eleven million thirty-five thousand nine hundred and eighty-four pesos.

The sums so appropriated shall be in addition to the sums appropriated in the annual appropriations for the Bureau of Education and shall be expended with the approval of the Council of State. The unexpended balances at the end of each one of the aforesaid years shall revert to the general funds of the Insular Treasury.

SEC. 2. This Act shall take effect on its approval.

Approved, December 6, 1918.

According to the report of the Director of Education, "in December, 1920, there were 6,886 public schools, of which number 65 were secondary schools, 737 were intermediate schools, and 6,084 were primary schools. Of the 65 secondary schools, 33 were four-year schools, 5 were three-year schools, 33 were two-year schools, and 16 were one-year schools. Of the 737 intermediate schools, 480 were three-year schools, 98 were two-year schools, and 158 were one-year schools." It is stated in the same report that, "the total annual enrolment in all public

schools as of December, 1920, was 935,678, or an increase of 159,039 over the total annual enrolment as of December, 1919. The increase in enrolment in primary and intermediate schools was 157,165 and the increase in enrolment in secondary schools was 1,874." The number of teachers in the public schools in 1920, exclusive of Directors and Superintendents, was, according to said report, 21,017, of whom 316 were Americans and 20,701 Filipinos.

As an illustration of the steady growth of public education in the Philippine Islands, the following comparative table is given:

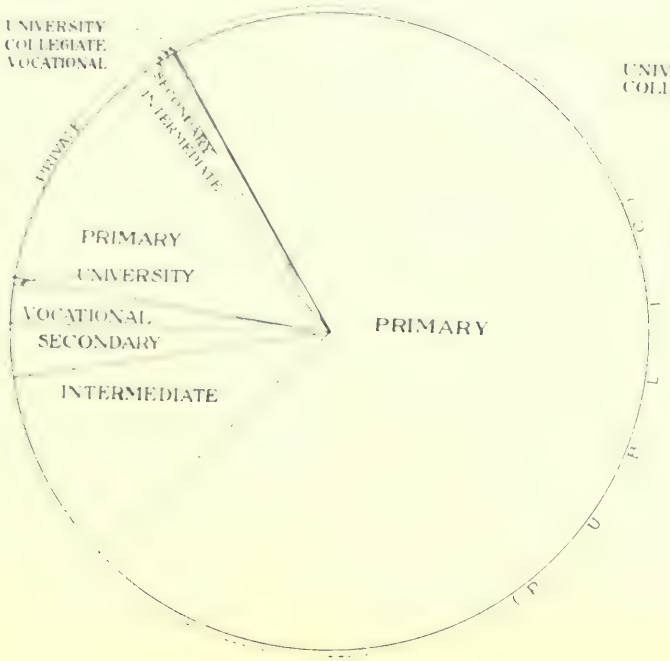
Comparative table on public schools.

	1918	1920
Number of public schools	4,785	6,886
Primary	4,165	6,084
Intermediate	434	737
Secondary	48	65
Total enrolment	676,283	935,678
Number of teachers	14,330	21,017
American	[a] 501	316
Filipino	[b] 17,172	20,701

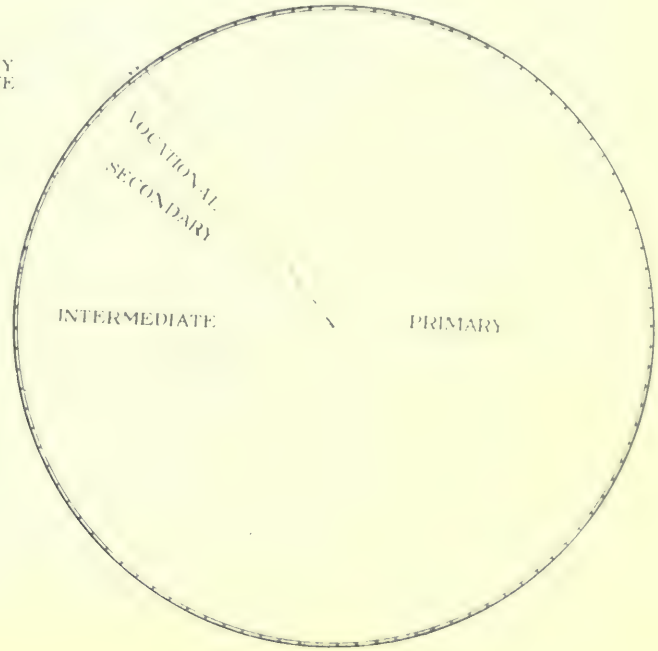
[a] Include superintendents and teachers in private schools.
[b] Public and private teachers.

PERCENTAGE OF ENROLLMENT IN ALL THE SCHOOLS DURING THE YEAR 1918.

Enrollment, public and private.



Enrollment, by grade.



PERCENTAGE OF PUPILS ENROLLED BY SEX AND GRADE.

ENROLLMENT AND GRADUATION IN THE UNIVERSITY OF THE PHILIPPINES.

ENROLLMENT AND GRADUATION IN THE UNIVERSITY OF THE PHILIPPINES.

By Ignacio Villamor,

Former Director of the Census.

A careful examination of the records of the University of the Philippines since the organization of its different colleges and schools discloses several interesting facts upon which may be safely based not only the general intellectual capacity of the Filipino people but also the high degree of enlightenment attained by them since the implantation of American sovereignty in the Philippines and the serious earnestness and enthusiasm with which they, as a people, have availed themselves of the educational opportunities opened to them. In view of this fact, it is deemed advisable to include a portion of the report of the President of the University of the Philippines in the Census Report on Schools to give some idea regarding that highest institution of learning in the Philippines.

The figures in the following tables show that the number of students and graduates has been gradually increasing in almost all the colleges:

Table No. 1.—*Percentage of increase or decrease of the enrollment of the University of the Philippines, by colleges and schools.*

College and school.	1918	1917	Percentage of increase (+) or decrease (—).
Total Enrollment	[a] 3,312	3,289	+ 0.7
College of Liberal Arts	517	377	+ 37.1
Junior College of Liberal Arts	20	.....	+100.0
College of Education	285	238	— 19.7
College of Medicine and Surgery	152	205	— 25.9
School of Pharmacy	105	83	+ 26.5
Graduate School of Tropical Medicine and Public Health	17	34	— 50.0
School of Dentistry	24	22	+ 9.1
College of Agriculture	363	564	— 35.6
College of Veterinary Science	92	90	+ 2.2
College of Engineering	144	108	+ 33.3
College of Law	210	251	— 16.3
Total	1,929	1,972	— 2.2
Duplications	24	24	....
Net total	1,905	1,948	— 2.2
School of Fine Arts	525	699	24.9
School of Forestry	50	45	11.1
Conservatory of Music	187	208	— 10.1
School of Nursing	364	315	— 15.6
University High School	281	74	279.7

[a] Including the 632 students enrolled during the second semester, 1918–1919, or after the Census Day.

TABLE NO. 2.—*Enrollment of students during eight years, by colleges and schools.*

[a] Including the 632 students enrolled during the second semester, 1918–1919, or after the Census Day.

Tables Nos. 1 and 2 show that the total number of students registered in all the colleges and schools of the University during the academic year 1918–1919 was 3,312, while the enrollment in that of 1917–1918 was 3,289, showing an approximate increase of 0.7 per cent. To mention in details, there was increase in attendance in the College of Liberal Arts by approximately 37.1 per cent, in the College of Education by 19.7 per cent, in the School of Pharmacy by 26.5 per cent, in the School of Dentistry by 9.1 per cent, in the College of Veterinary Science by 2.2 per cent, in the College of Engineering by 33.3 per cent, in the School of Forestry by 11 per cent, in the School of Nursing by 15 per cent, and in the University High School, a department of the College of Education organized last year, by 279.7 per cent, the last deserving special mention by having the highest percentage of increase during its two years of existence.

As will be seen from these tables the College of Medicine has during this academic year decreased in its enrollment as compared with that of last year, owing to the high tuition fees and the entrance requirements demanded in this college. The College of Agriculture also decreased its enrollment by 35.6 per cent, due to the raising of the entrance requirements in this college as per the resolution of the Board of Regents at its meeting on March 10, 1917. The same may be said of the

School of Fine Arts which also showed a decrease of 24.9 per cent.

TABLE No. 3.—*Enrollment of students during 1918–1919, classified by sex and nationality with their average age, by colleges and schools.*

College and school.	Total enrollment.	Male.	Female.	Americans.	Filipinos.	Other nationalities.	Average age. (Years.)

[a] Twenty-four duplications to be deducted from the total enrollment, and 362 students enrolled during the second semester 1918–1919, or after the Census Day.

Classifying the students according to their nationality, Table No. 3 shows that in the University, during its enrollment of 1918–19, there were 10 Americans, 1 from Borneo, 20 from China, 1 from Guam, 1 from India, 2 from Japan, 1 from Jerusalem, 1 from Russia, 9 from Siam, 4 from Singapore, and 2 from Spain. Table No. 3 also shows that there are 2,631 male students and 705 females, the latter being apportioned as follows: 87 in the University High School; 261 in the School of Nursing; 103 in the Conservatory of Music; 36 in the School of Fine Arts; 44 in the College of Liberal Arts; 2 in the College of Law; 2 in the College of Engineering; 1 in the College of Veterinary Science; 94 in the College of Medicine comprising the Schools of Dentistry, Pharmacy, Graduate School of Tropical Medicine and Public Health and the College of Medicine and Surgery; and 75 in the College of Education. The average age of the students in the whole University is 21.

[a] Including the 632 students enrolled during the second semester, 1918–1919, or after the Census Day.

Table No. 4 shows that these students come from almost all portions of the Islands and that several foreign countries have representatives in the University. The provinces that have more than 100 students in the University are: Manila with 494; Batangas, 209; Pangasinan, 207; Laguna, 199; Bulacan, 195; Pampanga, 167; Rizal, 153; Cavite and Ilocos Norte, 134 each; Tayabas, 117; and Iloilo and Nueva Ecija, 104 each. The number of students from other provinces ranks from 1 (Davao) to 92 (Ilocos Sur, La Union, and Occidental Negros).

Taking into consideration the number of students in the colleges and schools registering the largest enrollments, it is to be noticed that in the College of Agriculture, Pangasinan has 49; Batangas, 46; Cavite, 31; Bulacan, 25; Laguna, 22; Rizal, 19; Ilocos Norte and Pampanga, 13 each; La Union, Nueva Ecija and Zambales, 12 each; and Tayabas, 11; and other provinces range from 1 to 9. In the College of Medicine and Surgery, Batangas has 17; Manila, 12; Bulacan and Pampanga, 11 each; and other provinces from 1 to 10. In the School of Pharmacy, Manila has 13 and other provinces from 1 to 10. In the School of Nursing, Ilocos Norte has 32; Pangasinan, 30; Iloilo, 24; Ilocos Sur, 22; Batangas, 20; Tayabas, 17; Occidental Negros, 16; Cavite, La Union and Pampanga, 14 each; Leyte and Zambales, 13 each; Laguna, 12; and Rizal, 11; and other provinces from 1 to 10. In the College of Liberal Arts, Laguna has 48; Manila, 46; Batangas, 29; Iloilo and Pangasinan, 27 each; Occidental Negros, 24; Pampanga, 22; Bulacan, 21; Cebu, 19; Nueva Ecija, 16; Albay, Cavite, and Ilocos Sur, 15 each; Ilocos Norte, 14; Rizal, 13; Capiz and Tarlac, 12 each; and Camarines, 11; and other provinces from 1 to 10. In the College of Education, Manila has 29; Pangasinan, 21; Ilocos Norte, 19; Laguna, 17; Batangas, La Union, and Pampanga, 16 each; Rizal, 14; Bulacan, 13; Cavite, 12; and Tayabas, 11; and others from 1 to 10. In the Conservatory of Music, Manila has 81; Bulacan, 18; Rizal, 15; and Laguna, 12; and others from 1 to 10. In the University High School, Batangas and Laguna have 32 each; Manila, 26; Rizal, 19; Bulacan, 18; Tayabas, 17; Pangasinan, 16; Cavite, 14; and Ilocos Norte, 11; and other provinces from 1 to 10.

Though it is difficult to limit the gradual increase or decrease of the number of students representing a certain province, it is safe to say that in the choice of college course it is not only the scholar's own tendency that produces a great consequence, but also his environment, the rivalry of his associates, the

exigency of the province where he expects to practice his profession, and the possibilities that his province has acquired for him. In this manner, it will be noted that Manila has the greatest number of students in the Colleges of Law and Education, while Batangas ranks first in the College of Medicine and Surgery and Pangasinan in the College of Agriculture.

DEGREES CONFERRED.

The degrees conferred by the different colleges and schools in 1919, were 334, 202 of which were certificates. The graduates belong to different provinces and, as may be seen from Table No. 6, Manila, Pampanga, and Pangasinan deserve special mention for having the largest numbers of graduates. (See Tables Nos. 5, 6, and 7.)

The number of female graduates is constantly rising every year. In 1918, there were 48 different degrees conferred upon them, while in 1919, 56, showing an increase of nearly 17 per cent. In all, 214 different degrees have been conferred upon

them since the last nine school years, as shown in Tables Nos. 8 and 9. Manila leads in this number of degrees with 40; Pampanga, 22; Batangas, 20; Tayabas, 18; Laguna, 17; and the rest from 1 to 15. It may also be said that Liberal Arts, Pharmacy, and Education appear to be the courses preferred by our young women.

PROMOTIONS AND ELIMINATIONS.

Some useful informations may be had on the progress of the University by carefully examining its records since the organization of its different schools and colleges in order to determine educational mortality or the elimination of students. We have undertaken such an examination and Tables Nos. 12 to 19, inclusive, are the results. The records of each student from the first year up to graduation was followed, leaving aside those students who failed once or twice but who finally succeded in graduating. Since failure may be due to leaving the college before the examination, or by reason of that examination, it has been necessary to have in the tables two columns showing the proportion of elimination before and after the examination of every year. We are able in this way to separate not only the number of those who were eliminated and promoted from year to year until graduation, but also the proportion between those who begun the course and those who completed it, as well as those who were eliminated before graduation for some reason or other.

Preceding some others, it should be noted that Tables Nos. 15 and 16 of the College of Engineering and Agriculture, demonstrate some irregularities in the yearly attendance in view of the fact that considerably a number of students who learned in other institutions were conceded advance credit to the second, third, fourth or fifth year of these colleges.

From an examination of all these tables we see that a great percentage of elimination is found between the first year and the second year of every college, that elimination decreases steadily in the second, third, fourth, and fifth years, and 35.22 per cent of those who survive until the last year are able to finish their courses.

We shall now examine in detail the elimination of those students who entered the first year of the different colleges in order to find out the number of those who departed before the end of the year; the number of those promoted to the second year. In the College of Law, we find that for the last eight years of enrollment ending 1918, 17.5 per cent abandoned the college before the end of the school year; 17 per cent flunked in the examination and 65.5 per cent were promoted to the second year. In the College of Medicine and Surgery, for a period of twelve years ending in 1918, the percentages of those who abandoned the college before the end of the academic year and the number promoted to the second year are 15, 19, and 66 per cent, respectively. In the School of Pharmacy, for a period of eight years ending in 1918, we have 23, 27, and 50 per cent, respectively. In the College of Engineering, for a period of eight years ending in 1918, we have 35.16, and 49 per cent, respectively.

In the College of Agriculture, for a period of ten years ending in 1918, the percentages are 24, 7, and 69 per cent. In the College of Veterinary Science, for a period of nine years ending in 1918, they are 32, 9, and 59 per cent.

Summarizing these statistics on elimination and promotion of the first-year students, we see that 34.5 per cent of those matriculated in the first year in the College of Law are eliminated; 34 per cent in the College of Medicine and Surgery; 50 per cent in the School of Pharmacy; 51 per cent in the College of Engineering; 31 per cent in the College of Agriculture; 44 per cent in the College of Liberal Arts; and 41 per cent in the College of Veterinary Science. It, therefore, appears that the general average percentage of elimination in these six colleges and in the School of Pharmacy is 40.79, while the general average percentage of promotion to the second year is 59.21.

Out of the 40.79 per cent who were eliminated in the first year, 24.93 per cent abandoned the college before the final examination, while 15.86 per cent flunked in the examination. Of those who abandoned the college, some transferred to some other colleges, some were obliged to leave for economic

reasons, some engaged in different professions, while others were compelled by the faculty of the colleges either to abandon or to repeat the course, because of failure to meet the necessary requirements in this university.

Failure in the examination does not necessarily mean lack of natural ability, for there are several other factors which may contribute to produce it. The life, for example, in a city like Manila proffers too many attractions and temptations to the youth and many students do not spend as much time as they should on their studies. Also, many of the students from the different secondary schools recognized by the Department of Public Instruction are greatly deficient in their knowledge of the English language, and this handicaps them greatly. Some of the first year students take up courses in law, medicine, agriculture, engineering, etc., only because their parents or guardians compel them to do so, even though their mental power and interest do not follow these lines. Lastly, I may mention the difference in the method of teaching in the secondary schools and in the University. In the former, the method of recitation is much more practiced than in the latter, where that of laboratory and research work and lectures are used. The first method emphasizes memory, while the second, reasoning, so that, generally speaking, the new students cannot easily adapt themselves to the new method.

As has been cited above, the percentage of elimination decreases constantly after the first year. The causes of elimination in the years after the first year are generally the same as those of that year.

Average repeaters or irregulars	10.98	10.98
Actual percentage of elimination	62.29	.....
Actual percentage of students graduated	.....	37.71

SUMMARY.

General average	62.26	37.74
Average repeaters or irregulars	20.55	20.55
Actual percentage of elimination	41.71	.....
Actual percentage of graduations	.....	58.29

We shall now go over to inspect carefully Table No. 20 which shows the number of graduates in proportion to the number who commenced in the first year. Embracing those who were demanded to repeat one or more subjects, the percentages of graduation and elimination for every 100 students are found in the respective schools and colleges: College of Medicine and Surgery, 70.78 and 29.22; School of Pharmacy, 60.55 and 39.45; College of Law, 48.27 and 51.73; College of Liberal Arts, 67.45 and 32.55; College of Veterinary Science, 56.36 and 43.64; College of Agriculture, 66.89 and 33.11; College of Engineering, 37.71 and 62.29.

It will be noted that this graduation and elimination begin only from 1915 to 1919. I have judged this arrangement advisable by reason of the fact that in a college like the College of Agriculture, in its early years of attendance there were many irregularities in the matter of allowing special students; and, therefore, in order to make the standard of comparison with the other colleges it has been necessary to commence from 1915 only.

Comparing now the percentage of graduation and elimination in the different colleges, we find that the College of Medicine and Surgery has the highest percentage of graduation while the College of Engineering has the highest percentage of elimination.

If we consider the number of those who entered a college and those who finished the course in the normal number of years, from Table No. 19, we see that 37.74 per cent were graduated while 62.26 per cent were eliminated. Embracing, however, those students who had to repeat a year or more, we have 58.29 per cent of graduation and 41.71 per cent of elimination.

To give the public at large some idea of the achievements and ability of our students in their studies, I have prepared Tables Nos. 21, 22, 23, 24, 25, 26, 27, 28, 29, and 30 which show the distribution of 16,199 grades for the school year 1918–1919. The grades of the students are recorded on their record cards (U. P. Form No. 10) in conformity with the reports of the instructors. The grades are classified as 1, 2, 3, 4, and 5, and stand, respectively, for (1) marked excellent, (2) thoroughly satisfactory, (3) passed, (4) conditioned and (5) complete failure. In grading the students, the practice of American universities is followed. The result of the final examination, the daily work of the student, his notebooks, themes and laboratory work are all taken into consideration in determining the grades. The general practice is to give a grade of 5 to a student who has obtained an average of less than 60; 4, from 60 to 73; 3, from 74 to 79; 2, from 80 to 90; and 1, from 91 to 100.

Though we do proceed to a detailed discussion of certain important aspects of the grading of students, it is ample to state that student grades have in general a two-fold purpose, namely, to encourage the students to study and to give recognition to the merits of a student's work in order that a good example may be given to the whole as a social community.

Examining now the preceding tables we see that the College of Law has the highest percentage of grades 1 (19 per cent), while the College of Agriculture has the smallest percentage of that grade (1 per cent). This marked difference would seem to point out that the former college attracts more bright students than the latter. Ranking the other colleges according to percentages of grade 1 secured, they come in the following order: School of Dentistry with 17 per cent; Liberal Arts and Education with 11 per cent each; Engineering and Medicine with 8 per cent each; Veterinary Science with 6 per cent; and School of Pharmacy with 5 per cent. The percentage of grade 2 secured in the different colleges is as follows: College of Law with 44 per cent; Medicine with 36 per cent; Engineering with 28 per cent; Education with 25 per cent; Liberal Arts and Dentistry with 24 per cent each; Pharmacy with 22 per cent; Veterinary Science with 20 per cent; and Agriculture with 17

per cent. The percentage of grade 3 secured by the different colleges and schools is the largest of all. Of this, the College of Agriculture has the highest percentage, being 60 per cent, while the other colleges and schools are ranked as follows: School of Pharmacy with 55 per cent; Medicine and Dentistry with 52 per cent each; Engineering with 50 per cent; Liberal Arts with 48 per cent; Education with 47 per cent; Veterinary Science with 44 per cent and Law with 27 per cent. Of grades 4 and 5, the College of Engineering has the highest percentage, being 13, while the other colleges are ranked as follows: School of Pharmacy 10 and College of Veterinary Science 10 per cent and Education, Dentistry and Liberal Arts 8 per cent each; Law 6 per cent; and Medicine 2 per cent. In brief, the great majority of grades are passing grades, thus indicating that a great majority of the students are able to pass their courses. The number of other grades secured are ranked 2, 5, 1, and 4; that is, there are more grades of 2 than 5 (more than twice as many), and more grades of 1 than 4.

NOTE.—The 1,749 college scholarship marks for the six-year course at the College of Agriculture are not included.

With the purpose of giving an idea of the equality of instruction given in the public high schools as well as in the private preparatory schools, Tables Nos. 31, 32, 33, 34, 35, 36, 37, 38, 39, and 40, respectively, have been prepared, showing the distribution of 14,450 grades by schools.

From these tables we see that there are 30 public schools and 22 private schools which have prepared students for the University, and also 10 foreign schools which have qualified their representatives for entrance in this university. Out of these 62 schools, we shall consider only 25, for only these have secured 100 grades or over of different kinds in the University. The same standard of comparison can, therefore, be applied to them. Now, based upon the number of grades secured, these 25 schools are ranked as follows: Manila High School, 4,104; Ateneo de Manila, 721; Philippine Normal School, 703; Iloilo High School, 613; National Academy and Cebu High School, 567 each; Pampanga High School, 548; Ilocos Sur High School, 540; Pangasinan High School, 506; Tayabas High School, 491; Batangas High School, 461; Laguna High School, 384; Bulacan High School, 376; Silliman Institute, 367; Occidental Negros High School, 299; Capiz High School, 277; Camarines High School, 217; Albay High School, 210; Nueva Ecija High School, 177; Centro Escolar de Señoritas, 173; La Union High School, 170; Liceo de Manila, 163; Cagayan High School, 153; Ilocos Norte High School, 131; and College of Agriculture, 114.

Based on the percentage of grades 1 secured, these schools are ranked as follows: (1) Philippine Normal School; (2) Ate-

neo de Manila; (3) Nueva Ecija High School (4) Silliman Institute; (5) Manila High School; (6) Iloilo High School; (7) Cebu High School; (8) Camarines High School; (9) Pangasinan High School; (10) Ilocos Norte High School; (11) Capiz High School; (12) Ilocos Sur High School; (13) Tayabas High School; (14) La Union High School; (15) Centro Escolar de Señoritas; (16) Pampanga High School; (17) Cagayan High School; (18) Batangas High School; (19) Occidental Negros High School; (20) Bulacan High School; (21) Albay High School; (22) National Academy; (23) Laguna High School; (24) Liceo de Manila and (25) College of Agriculture.

Based on the number of students who were promoted with passing grade, these schools are ranked as follows: (1) Ateneo de Manila; (2) Philippine Normal School; (3) Silliman Institute; (4) Manila High School; (5) Iloilo High School; (6) Cebu High School; (7) Pangasinan High School; (8) La Union High School; (9) Capiz High School; (10) Pampanga High School; (11) Albay High School; (12) Nueva Ecija High School; (13) Bulacan High School; (14) Ilocos Sur High School; (15) Occidental Negros High School; (16) Centro Escolar de Señoritas; (17) Tayabas High School; (18) Camarines High School; (19) Cagayan High School; (20) Batangas High School; (21) Liceo de Manila; (22) Laguna High School; (23) Ilocos Norte High School; (24) National Academy; and (25) College of Agriculture.

Finally, based on the number of students who secured an average grade lower than 3, the passing grade, these schools are ranked as follows: (1) National Academy; (2) Liceo de Manila; (3) Laguna High School; (4) Tayabas High School; (5) College of Agriculture; (6) Centro Escolar de Señoritas; (7) Ilocos Sur High School; (8) Albay High School; (9) Bulacan High School; (10) Pangasinan High School; (11) Camarines High School; (12) Capiz High School; (13) Silliman Institute; (14) Pampanga High School; (15) Occidental Negros High School; (16) Ilocos Norte High School; (17) La Union High School; (18) Batangas High School; (19) Nueva Ecija High

School; (20) Cagayan High School; (21) Manila High School; (22) Philippine Normal School; (23) Cebu High School; (24) Ateneo de Manila; and (25) Iloilo High School.

Of the schools, colleges, and universities which have secured less than 100 grades but received a good number of grades 1 to not less than 10 per cent, are as follows: De la Salle College, Instituto de Mujeres, Government School of Technology, China; Ohio State University, U. S. A.; Colegio-Seminario; Wang Lang High School, Siam; Liberal Arts Academy; Zambales High School; Union College, China; Rizal High School; Philippine School of Arts and Trades; Colegio de Santa Isabel; and Saint John University, U. S. A.

In conclusion, I may state that although the grades secured by students in the University do not conclusively show the standing of the schools from which they come, yet, if grades have been of any value at all, it may be stated for the benefit of the schools concerned, that high grades secured in the University are correlated with better preparatory instruction of the students, and that poor grades may be attributed partly to defective instruction in the preparatory schools.

The 1,749 college scholarship marks for the six-year course of the College of Agriculture are not included.

The preceding tables have been prepared for the purpose of determining whether or not there is any relation between scholarship marks and the entrance age of the students.

When we examine Tables Nos. 41, 42, 43, 44, 45, 46, 47, 48, 49, and 50, respectively, we find that the ages of the students in the University range from as low as 17 to as high as 37 years. From these tables we also see, as a general rule, that the younger students are the brighter ones, and are mostly found in the College of Law, Medicine and Surgery, Education, Engineering, and Liberal Arts especially. The older students, that is, those above 25, are mostly also found in the College of Law, Education, Liberal Arts, and Medicine and Surgery. In the first college, more of these older students are employees of private firms or of the Government who are residing in the city, and take opportunity of pursuing their studies in this college, and so in the second and third; while in the fourth, that is, in the College of Medicine and Surgery, they are mostly doctors taking graduate courses in the School of Tropical Medicine and Public Health. The majority of the students, however, are between the ages of 18 and 24. Students between these ages have secured the best grades, as a general rule, and this would seem to show that our youth, as a result perhaps of earlier development due to the influence of tropical climate are able to pursue university studies at as early an age as 18 or 19 years. As noted in my last report according to the figures in the tables under examination, children should begin their studies in the primary schools at the age of 5 or 6 years in order that they may pass to the intermediate schools at the age of 13 or 14. In this way, after completing the high schools at the age of 17 or 18 and after taking one or two year preparatory course in the College of Liberal Arts, they may enter upon their professional studies in the University at the age of 18 or 19. As the professional courses generally take from 4 to 6 years, our students would, therefore, finish their course at the age of 22 to 26 after 16 or 17 years of study.

Considering now the relation between ages and the number of grades 1, we find that male students of the ages between 20 and 29 generally lead in all the colleges, while in the case of female it is between the age of 18 to 26 or 27. This fact would seem to indicate that women mature intellectually earlier than men.

COMMERCE AND TRANSPORTATION.

COMMERCE AND TRANSPORTATION.

By Manuel Sityar,

Former Chief, Second Division of Population.

Statistical Data—Commerce of the Philippines up to 1903—Commerce of the Philippines up to 1918—Principal Exports—Principal Imports—High Sea Vessels—Interisland Commerce—Lighthouses and Buoys—Telegraph and Postal Service—Steam Railroads—Street Railways—Roads.

Instead of preparing a special schedule for the collection of data for this chapter on commerce and transportation in the Islands, the Census Office has preferred to utilize such statistics and other information gathered during the year 1918 by the various Government offices as have a direct bearing on the subject-matter of this portion of the Census work.

The Philippine trade was not opened to the world, and ships other than those of Spain were not permitted to have a share in Philippine commerce until 1834. The galleon trade with Mexico had been brought to an end by the successful rebellion of that country against Spain. After the declaration of Mexican independence on August 23, 1821, direct commerce with Spain via Cape of Good Hope was established and no restrictions were placed on the carrying of Philippine products to the Peninsula, though limitations on the value of exports of Chinese goods from Manila were imposed, so that a general trade with the whole commercial world was gradually developed. American, English, and German firms and those of other nationalities were from time to time established at Manila, Iloilo, and Cebu; some of them maintained important branches at other insular points.

The commerce of the Islands from its commencement until after 1834, entered at Manila, where, during this entire period, the only customhouse established in 1573, was located. After the colonial trade was opened to the world, other ports of entry and customhouses were established. Zamboanga, in Mindanao, was made a port of entry, and a customhouse was established there by royal decree of January 24, 1833, though historians

differ as to the year when it was opened. Customhouses at other Insular ports were established as follows: Cebu, April, 1842; Iloilo and Sual, March, 1855; Legaspi and Tacloban, January, 1874. The ports of Sual, in the Province of Pangasinan, Legaspi, in the Province of Albay (both on the Island of Luzon), and Tacloban, in the Province of Leyte, failed to develop and were discontinued. The customhouses at Manila, Iloilo, Cebu, and Zamboanga remained in operation up to the time of the American occupation of the Islands, after which they were reopened under the American government, together with other ports, as follows: Manila, Luzon, August 20, 1898; Iloilo, Panay, February 22, 1899; Cebu, Cebu, March 14, 1899; Jolo, Sulu, December 26, 1899; Siassi, Sulu, December 26, 1899 (discontinued June 1, 1902); Zamboanga, Mindanao, December 26, 1899; Aparri, Cagayan, Luzon, June 1, 1902.

The commerce of the Philippines was considerably benefited by the opening of the Suez Canal in the year 1869, which shortened the voyage of vessels engaged in the European traffic. From reliable data on imports and exports collected under the Spanish government, it appears that the value of our foreign commerce in 1870, when said canal was opened, increased from ₱77,610,640, Philippine currency, to ₱107,400,500 the following year, that is to say, the total exports of the year following the opening of Suez Canal show an increase of 37.6 per cent. Steamships have been instrumental in accelerating the mercantile activities of this Archipelago. The natives, having partly attained their political aspirations, have a greater incentive to a more active life. From the above mentioned data it also appears that the total value of Philippine exports from 1898 to this date is almost equal to those from 1831 to 1898. Since 1912, our import and export trade has aggregated over ₱200,000,000, and in 1918 it amounted to ₱467,587,397, which represents an increase of 44.8 per cent over the preceding year. This result is, no doubt, partly due to the termination of the Great War which devastated the world from 1914 to 1918, in which latter year an armistice was signed by the belligerent nations. It has brought to the Islands the advantages of America's triumph, as she will necessarily endeavor to make the Pacific her principal field of commercial expansion outside of the Continent, and it would not be astonishing if she selected the Archipelago, owing to its geographical situation, as the center of distribution of her merchandise in in the Orient. The opening of the Panama Canal seems to favor this scheme.

From an examination of the import and export trade after the enforcement in these Islands of the Payne Bill—by which the entry in the United States, duty free, of certain agricultural products of these Islands is allowed, in exchange for nearly every American article for which there is no similar product in this Archipelago—it will be seen that said bill materially helped to increase the Philippine import trade, which exceeded the export trade during the years 1910–1913. It is evident that this bill has greatly reduced the customs receipts, and while it has worked a serious hardship on the interests of a great majority of the inhabitants of these Islands, the American manufacturers have profited thereby. However, if the theory of the French economist E. Lavelaye is to be accepted, the people are in the last analysis benefited by this privilege, because according to that theory the imported commodities are paid with the value of the exports and not with actual money, and therefore any excess of imports is a gain for the country importing, because the Philippine articles secure better prices, unless intentionally depreciated by the exporters.

THE COMMERCE OF THE PHILIPPINE ISLANDS IN 1903 AND 1918.

In 1903, the total import and export trade, in which vessels of different nationalities participated, amounted to ₱150,440,444, local currency, and in 1918 it totaled ₱467,587,387 which shows an increase of ₱317,146,943.

The most noticeable feature of Table No. 4 is that the tonnage of the Japanese vessels engaged in the foreign carrying trade of the Philippines in 1918 amounted to 1,173,918 tons, as against 11,777 in 1903. The total tonnage of American and English vessels—omitting the Philippine coastwise trade—was 338,266 and 610,208 tons, respectively, in 1918. The inference is that the tonnage of the Japanese vessels engaged in the Philippine trade was larger by 225,444 tons.

This increment, however, of Japanese vessels has been more beneficial to the English and Americans than to the Japanese themselves, as the value of the merchandise carried by them was as follows:

American	₱162,861,385
English	120,999,888
Japanese	107,698,080

which may account for the fact that the Japanese vessels have obviated in a great measure the difficulties of the transportation

of English and American merchandise through the points of call to Australasia and the American ports of the Pacific which are trading with the Philippines.

The tables of imports and exports show the following:

	1903	1918
Exports	₱79,909,266	₱270,388,968
Imports	70,531,178	197,198,423
Total	150,440,444	467,587,387

A great difference will be noted between the figures of the above table and those showing the value of the merchandise which entered and left the Philippines during the periods above referred to. This is due to the fact that some of the merchandise the value of which is included in the figures referring to maritime transportation, was in transit only, which shows the importance of the Philippines as regards the development of commerce with oriental countries.

The investments in the commerce, industries, and manufactures of the Philippines, according to the data of the present Census, as compared with those of the Census of 1903, have increased ₱115,866,168, in the following manner:

	Number.	Capital.
Commerce	1,093	₱83,828,279
Industries	37	17,251,240
Manufactures	119	21,379,429
		122,453,429
Decline in other items	19	6,594,780
Total		115,866,168

The comparative statement of the commerce of the Philippines with other countries during the year 1918, according to the Census returns, shows that, besides the greater totals of imports and exports with America, Hawaii appears with the largest increase between said dates, representing 103.73 per cent; then come Canada, with 32.48 per cent, and the British possessions in Africa, with 24.42 per cent. A decline in our trade with China, France, Germany, and other European countries has been noted, as a consequence of the past war.

The constantly increasing business prosperity in the Philippines is evidenced by the table of registered corporations, which number 1,534, with a subscribed capital of ₱115,225,686, out of a total of ₱242,201,067.

In the table of these mercantile corporations, the mining corporations occupy the first place among those organized for the development of natural resources, and have the greatest capital, ₱45,467,800. Those for agricultural purposes rank second only, with a total capital of ₱23,428,546, notwithstanding the fact that the Philippine Islands are an eminently agricultural country. This may be explained by the fact that the agricultural industry is not generally carried on by corporations, for the reason that a considerable area of the land suitable for agriculture is of private ownership. As to industrial corporations, the first place is occupied by those engaged in general commerce, with a total capital of ₱37,625,030, and next follow the common carriers, with a capital of ₱20,008,020. It is not possible to establish a comparison with the commercial activities of 1903 on the basis of these tables, because at that time there was not a Corporation Act like the one now in force.

PRINCIPAL EXPORTS.

Among the Philippine products exported to foreign countries, abacá, or Manila hemp, stands paramount. The quantity exported during the year 1918 amounted to ₱116,383,100, which, compared with the exports of this fiber for 1917, shows an increase of 24.3 per cent, due to the high prices obtained for it in the market.

Abacá is followed in importance by the coconut oil exportations which, during the year 1918, rose to ₱63,328,317, an increase of 177.5 per cent over the exportations of the same commodity in the previous year. On the other hand, the exportation of copra, the raw material with which the coconut oil is manufactured, declined 37 per cent, owing to the fact that a good price was paid for it in the local market, as there was a great demand for it to supply the local oil factories, which have grown in number and importance both in Manila and Cebu during the past years.

The sugar exported, according to the last report of the Bureau of Customs, was valued at ₱31,608,780 during the year under review, showing an increase of 28.72 per cent as compared with the exports of this staple in the preceding year.

Tobacco occupies the fourth place among the local products exported in 1918. Twenty-seven million one hundred fifty thousand six hundred and twenty-six pesos worth of tobacco was exported, an increase of 89.85 per cent as compared with the figures for 1917.

From the foregoing it will be seen that during the year 1918 there has been, as to these four principal exports only, a total increase of ₱83,180,532, which shows that said year was an exceptionally favorable one, such as never before known in previous times, for the foreign trade of the Philippines.

Among the articles growing in importance and the demand for which is steadily increasing, especially in the United States, are embroidery, lace, and other needlework in general, the value of which reached ₱4,361,352 in 1918. In 1915, this industry was practically in its infancy in the Philippines, with an export value of ₱735,303; in 1916, it amounted to ₱2,328,024, and later, in 1917, to ₱3,929,318. This rapid growth is perhaps due to the past war which brought the production of these articles in Europe practically to a standstill. At all events, the manufacture of these goods has taken root in the country, as a result of its commercial progress. What in previous years was a mere household industry, appreciated only as an evidence of the artistic taste of the Filipinos and of their practice and skill in needlework, has now become a flourishing industry.

PRINCIPAL IMPORTS.

The imports for the year 1918, as shown by the corresponding table, aggregated ₱197,198,423, which represents an increase of 50 per cent over those of the previous years.

This remarkable increase, which reveals a constantly growing prosperity of the inhabitants of the Philippine Islands during the years elapsed since the taking of the previous Census, is in perfect accord with the increase of the export trade.

The principal imports were the following:

COTTON GOODS.

The total value of the imports in the year 1918 amounted to ₱58,016,844 which, compared with the import value in the preceding year, shows an increase of 54.4 per cent. This is due not only to the larger amount imported, but also to the increase in the prices of these goods, which, like other manufactured products, have obtained an increase of 50 per cent in one year. Cotton goods imported from the United States, Japan, and China have been larger, and a similar increase is noted in

those coming from England. On the other hand, French, Italian, and Spanish importations of this article have considerably decreased, and cotton manufactures from Germany and other states of Central Europe have been practically eliminated, as a result of the late war.

IRON AND STEEL.

The importation of manufactured iron and steel has also increased over 100 per cent during the year of the present Census; the value of these imports amounted to ₱24,507,970, as compared with ₱11,855,125 in 1917. Of that amount, almost 92 per cent was American manufacture; the value of that coming from Japan was only 5 per cent. This latter country has thus won the second place in this respect, though not in a remarkable way, and has superseded England in the local market, inasmuch as the total value of the iron and steel manufactures exported to the Philippines by the United Kingdom, which was ₱2,279,244 in 1913, went down to ₱215,090 in 1918.

RICE.

As the prices of all commodities, especially those of the staple foods, are increasing all the world over, the import value of rice, which is the principal food of the native population, has also increased. In 1918, 183,726 metric tons of this grain were imported, which represents an increase of 36,740 tons over the rice importations of the previous year. The estimated value of this import, which was ₱10,781,463 in 1917, at the rate of ₱7.33 per 100 kilos, was ₱16,433,585, as there was not only an increase in the quantity imported, but also in the price, which was ₱8.94 per 100 kilos. It may, however, be inferred from the data published annually that the rice importations decrease from year to year, and it is to be hoped that in a not distant future sufficient rice will be grown here for local consumption, although not enough for exportation to the neighboring countries, as was the case in ancient times.

MEAT, FISH AND OTHER FOOD PRODUCTS.

The total value of the food products imported during the year 1918, including rice and cattle, amounted to ₱25,627,985, as compared with only ₱17,608,865 in 1917. Of the imported wheat flour, meat, vegetables, and other food products, 75 per cent came from Australia, valued at ₱5,526,666. The importation of fish was especially remarkable; its value was ₱5,212,350, which represents an increase of 180 per cent over the value of the fish imported in 1917.

COAL.

The value of the mineral coal imported in 1918 was ₱4,662,349, an increase of 51 per cent over that of the preceding year. This increase was due to the considerable increase in the price of this fuel; so that while the amount imported was smaller, its value amounted nevertheless to the above figure. At present, the Insular Government has undertaken the development of the coal mines existing in the Archipelago, by which it is hoped to relieve the country from the expense of importing this mineral from abroad.

OTHER IMPORTS.

There has also been a considerable increase in the importation of luxuries, which, it would seem, reflects the growing prosperity of the inhabitants of these Islands. Six million five hundred twenty-five thousand six hundred and sixty-five pesos worth of automobiles and accessories thereof, and ₱5,727,024 worth of silk goods were imported this year. These figures are the highest on record in the customhouses of the Philippines.

If it is considered that the total value of the 1917 exports reaches the sum of ₱131,594,061, and that those of 1918 were worth ₱197,198,423, it will be seen that there was an increase of 49.9 per cent during the latter year.

HIGH SEA VESSELS.

The geographical condition of the Archipelago, which is composed of 7,083 islands with a total area of 114,400 square miles, makes maritime transportation of great importance, both for the trade with foreign countries and for interisland commerce.

The facilities for commercial intercourse between Manila, the center of trade between the Philippines and America, Europe, the Orient, and elsewhere, have been sufficient for the demands of commerce, and have grown with the remarkable increase in imports and exports since the establishment of American sovereignty. The steamers of 14 steamship companies, in addition to the steamers of the army transport service, visited Manila regularly, either weekly, semimonthly, or monthly, during 1902, carrying passengers and merchandise to and from the various foreign countries engaged in trade with the Islands. Since the American occupation, the increase in foreign trade has necessarily been accompanied by a corresponding growth of interisland commerce. The number of these ports, coastwise ports, and subports under the Spanish rule, immediately

prior to American occupation, was only 63. The present Insular Government has fostered trade and transportation in all possible ways, and has endeavored to encourage insular maritime traffic by establishing open ports and subports whenever and wherever the interests and convenience of the public have made such action advisable.[1]

As may be noted from Table No. 4 the number of high sea vessels, that is to say, those engaged in the transportation of merchandise to foreign ports—excluding those of the interisland commerce—amounted to 1,311 during the year 1918, as against 245 in 1903, a tonnage increase of 2,705,270.

This activity in the foreign carrying trade resulted in an increase in the value of the import and export trade, which was ₱150,440,444 in 1903 and ₱467,587,387 in 1918, an increase of 210.8 per cent in fifteen years.

From the details of this table it will be seen that vessels under the German flag which before the year 1914 were competing in number and tonnage with those of England in the foreign transportation trade of the Philippines, had been completely eliminated in 1918. But, with the exception of those of France, Spain, Sweden, and Norway, all remaining vessels under foreign flags that took part in the commercial activities of this Archipelago have increased, particularly those of England, United States and Japan, whose tonnage, during the past year, in comparison with corresponding returns of the Census of 1903, have attained an increase of 228.2, 905.9, and 9,867.0 per cent, respectively. The heavy increase of Japanese tonnage which has maintained a traffic with the Philippines during the year 1918 finds an explanation in the necessities of the past war, whereby the American and English have been compelled to engage a large proportion of their mercantile fleet in the transportation of troops and merchandise across the Atlantic. The same table reveals, however, the singular fact that out of the total value of merchandise carried to these Islands in the above mentioned year, the figures corresponding to England and America are greater than those of Japan.

INTERISLAND COMMERCE.

The commodities transported by Philippine coastwise vessels in the period comprised by the years 1903 and 1918 have increased in proportion to the general commercial prosperity of the Philippines during the same period. Notwithstanding the

[1] According to 1903 Census.

losses suffered through the natural contingencies of sea life, aggravated by the effects of the submarine war during the past years, seeing that several vessels registered in the Philippines were torpedoed and sunk in foreign waters, the increase of its tonnage has been remarkable. Among the new units there are motor ships of up to 1,000 tons, built in this country.

LIGHTHOUSES AND BUOYS.

Greater safety in travel increases interisland traffic. The work of the Philippine Bureau of Coasts and Geodetic Survey and that of the Bureau of Commerce and Industry in the maintenance and improvement of the service of lighthouses and buoys have contributed a great deal to this development. The telegraph lines have also contributed to this result by facilitating communication between the main islands of the Archipelago, besides connecting the Philippines with Europe and America by means of submarine cables and powerful radio stations for telegraphic communication within and without the country. The extension of telephone lines is another factor of economic progress, as they contribute to the rapidity of business transactions.

TELEGRAPH AND POSTAL SERVICE.

In 1918, there were in the Philippines 315 telegraph and 10 radio stations, representing 9,123.74 kilometers by land and 1,405.62 kilometers by sea.[1] During this year the number of telegraphic messages transmitted was 1,233,380.

The postal service must be mentioned as one of the factors of mercantile progress. In 1918, there were 828 post-offices in the various provinces, with 435 routes representing a total distance of 2,996,622.78 kilometers. Nine million eight hundred eighty-six thousand nine hundred and twenty-three letters were sent and delivered, and 2,561,880 were registered by the Post Office at Manila. Thirteen thousand packages were received from abroad and sent to other countries.

RAILROADS.

The railroads of the Philippines were formerly owned by a foreign company, but the more important ones, namely, those on the Island of Luzon, have been purchased by the Insular Government.

Comparing the data furnished by the Census of 1903 with those of 1918, it will be observed that the mileage of the railroads in Luzon has increased from 121.79 miles to 629.90; besides there are 131.74 miles on the islands of Cebu and Panay.

[1] This must be 1,405.62 of maritime cables.

In 1918, the railroads had 1,013.71 kilometers of track, and 214 passenger and 1,650 freight cars. The number of passengers carried totaled 6,851,705, and the freight carried weighed 1,132,575 tons. In Cebu and Panay there were 212 kilometers of track, with 49 passenger and 199 freight cars, and during the period mentioned 1,551,301 passengers and 96,614 tons of freight were carried.

STREET RAILWAYS.

The Census of 1903 mentioned two systems of street railways then in operation, the steam tramway from Manila to Malabon—a town in the vicinity of Manila, 4.35 miles from the capital—and the street railway of Manila, operated by animal traction, which had been established since the year 1881, when the Spanish Government, which ruled the Archipelago, granted a franchise to the Tramway Company of the Philippines. Both companies ceded their rights to the Manila Electric Railroad and Light Company, commonly known as the "Meralco," organized in 1903 and controlled by American capital.

The system used by the street cars is the overhead trolley system, using direct current of a high potential power for traction, and of 220 volts for illumination purposes.

There are first and second-class fares; the first-class fare is 12 centavos, and the second-class fare, 10 centavos; these rates are reduced to 11 and 8 centavos, respectively, by purchasing tickets from the company. Children going to and from school have the privilege of paying half the ordinary rates, the same as children under 7 years of age, as provided in the franchise.

The electric railroad operates in all the districts of the city of Manila, and has branches running north as far as Malabon (Tambobong), and south as far as the municipality of Pasig, the capital of Rizal Province, passing through the military reservation known as Fort McKinley.

The company pays the usual taxes both to the city of Manila and the Province of Rizal for the entire distance covered by its line, that is, 2½ per cent of its gross earnings from the fares collected, and 2½ per cent of its earnings from its light and power business. It is, on the other hand, exempt from all taxes on its privileges, earnings, income, road bed, track, rolling stock, poles, wires, transformers, and insulators, as the payment of the 2½ per cent on the gross earnings, as provided for by the franchise, takes the place of these taxes.

Another land transportation facility which in the last decade has been rapidly developing in the Philippines are the motor vehicles (automobiles and trucks), which take care of a considerable portion of the passenger and freight traffic. In 1918, there was a total of 7,322 motor vehicles registered in the Bureau of Public Works, classified as follows: 5,569 automobiles, 657 trucks, and 1,106 motorcycles.

ROADS.

Good roads are a great convenience in all civilized communities, but in the Philippine Islands they are regarded as a necessity on which the tranquility of the people and their material progress largely depend. This appears to have been fully recognized by both the Insular and provincial authorities, who have done probably as much as is practicable under existing circumstances to improve the roads. Two kinds of road appear to be recognized by the Insular Government, first, Insular roads, leading from one side of an island to another, or those connecting different provinces, which are too general in their character and too expensive to be a charge against any particular province, and are maintained by Insular funds; and, secondly, those roads which lie entirely within a province and are essentially for its own benefit. For the construction and repair of provincial roads and bridges, the provincial board is required to levy one-eight of 1 per cent on the assessable land of the province; in addition, a large amount of money has been loaned to the provinces by the Insular Government during the past two years to enable them to construct good roads; but their condition is not good, and a great deal remains to be done to render them available for traffic.

Owing to the careful attention paid to the improvement and extension of roads and highways in the Philippines in the past years, we have at present excellent roads in the principal islands of the Archipelago. The Philippine Legislature has authorized the provincial governments to double the cedula tax for the purpose of improving roads, and this measure, coupled with the efforts of the engineers of the Bureau of Public Works, has resulted in the construction of many good roads and strong bridges, a large number of which are of steel and cement.

According to the statistical tables of the Census of 1918, the total length of roads and highways existing in the Philippines is 9,234.7 kilometers, of which 4,500.3 are first-class roads. It will be observed that the Province of Pangasinan ranks first

as to the length of first-class roads, with 296.6 kilometers; the Province of Cebu, with 289 kilometers, comes next, and the Province of Occidental Negros ranks third, with 247.7 kilometers of roads already constructed. There is only a slight difference between this province and Iloilo, as the latter has 247.4 kilometers, of such improved roads. As regards the total length of first, second, and third-class roads, the said provinces are still in the same order, as the roads of Pangasinan aggregate 642.2 kilometers; those of Cebu, 639.2 kilometers; those of Occidental Negros, 509.3 kilometers, and those of Iloilo, 441 kilometers.

Some of the subprovinces in the mountainous regions of the Island of Luzon, viz: Bontoc, Lepanto, Ifugao, Kalinga, and Apayao, have no first-class roads. The same is the case with the Subprovince of Bukidnon, on the Island of Mindanao, and the Province of Romblon, in the Visayan group. On the other hand, with the exception of Apayao, which has only a few kilometers of trail, all these subprovinces have roads classified as third-class roads, and the Subprovinces of Bukidnon and Lepanto distinguish themselves by having, besides, 114.3 kilometers and 2 kilometers, respectively, of second-class roads.

The estimated average cost of building first-class roads is ₱725.54 per kilometer, and ₱220 per kilometer for second-class roads. The average expense of keeping first-class roads in good state of repair is, according to the observations made during the past five years, ₱738.84 annually per kilometer.

Such was the condition of the roads in the Philippines in 1918, as compared with 1903. As transportation facilities—ships and railroads, roads and highways—are as important to the nation as arteries and veins are to the human body, it is indeed encouraging to observe that in the progressive development of commerce in the Philippine Archipelago these transportation facilities have been properly cared for. It would therefore not be a venturesome prediction to state that the Philippines will continue to bear the name of "Pearl of the Orient," which she has borne from the remotest time, notwithstanding her enervating tropical climate.

BANKS, BANKING INSTITUTIONS, AND CURRENCY.

BANKS, BANKING INSTITUTIONS, AND CURRENCY.

As shown by Table *1*, thirteen banking institutions and building and loan associations were doing business in the Philippine Islands on December 31, 1918; of these, nine were domestic, two British, and one Japanese. They maintained branches or agencies at Iloilo, Zamboanga, Aparri, Bacolod, Cebu, Corregidor, Davao, and Cabanatuan, in the Philippine Islands, and at New York, U. S. A. One of them, the Postal Savings Bank, had agencies in all the provinces. Their operations consisted in general banking; agricultural, industrial, and comercial loans; deposits, etc. The assets of these institutions aggregated ₱399,807,942. In addition to the International Banking Corporation which is owned by The National City Bank of New York, N. Y., two big banking institutions domiciled in New York, the Asia Banking Corporation and the American Foreign Banking Corporation, which was replaced by the Chinese-American Bank of Commerce, opened branches in Manila in 1919, and later the China Banking Corporation was organized under the local laws.

When the Census of 1903 was taken, there were only nine banks, with assets aggregating ₱54,119,118.06. Four of these nine banks were liquidated; the other five survived and were still doing business in 1918. The Census of 1918 shows an increase of ₱345,688,754.94 in the assets of banking corporations. In order to give further details, we append Table *2* which is a comparative statement of the aggregate assets and liabilities of all Philippine banking institutions in operation in the years 1903 and 1918. This table is supplemented by Table *3*, which shows the operations of the banking institutions for the years 1913 and 1918, and demonstrates that the demand for money has kept step with the constantly growing volume of the business of the Islands.

In addition to the banks and banking institutions above cited, more or less engaged in the banking business, we must mention the Bureau of Lands which makes loans to the purchasers of certain public lands, for the sole purpose of facilitating the

payment of the installments due to the Government; the rural credit associations in a number of municipalities of the Philippine Islands; the pawnshops; the money-lenders with and without license, and the usurers. The latter advance funds to planters, small business men, and others in need of money, and charge big interest; these transactions are generally made to appear as sales with option to repurchase, and the owner of the property is represented as lessee thereof and pays an usurious interest on the money borrowed in the shape of rent.

Prior to the approval of the Act of Congress No. 137, of March 2, 1903, entitled "An Act to establish a standard of value and to prescribe a coinage system in the Philippine Islands," the fluctuations of the money in circulation were a constant source of embarrassment to the business world. The principal coin in use at that time was the Mexican dollar, the rate of exchange of which with regard to the American dollar was changed by executive order at least once every ten days. From September, 1901, to October, 1903, the value of the American dollar ranged from 2 and 2.10 to 2.66, Mex. Subsequently the American dollar went as high as 2.68 and 2.70, Mex. Until January 1, 1904, Mexican silver was accepted in payment of public taxes and dues; but in pursuance of the Act of Congress above referred to, coins of the denominations of 1 peso and 50, 20, 10, 5, 1, and ½ centavos were struck and notes of the denominations of 2, 5, 10, 20, 50, 100, and 500 pesos engraved, at the ratio of two pesos to the dollar, which ratio was maintained by Act No. 938 of the Philippine Commission, of October 10, 1903.

The Philippine peso is generally known as the Conant peso; it is so named after the founder of the system, Charles A. Conant. Owing to the rise in the price of silver, the coins minted in 1903 came near disappearing altogether, as they were being exported. To remedy this state of affairs, the Philippine Commission, on December 6, 1906, passed Act No. 1564, by which the weight and fineness of the silver coins of the Philippine Islands were reduced.

The currency notes found such ready acceptance that the Government was able to retain the silver coins in the vaults of the Insular Treasury and sell them at a considerable gain when, owing to the war, the price of the silver had gone up in the market. The popular 1-peso bill was authorized by Act No. 2775, of May 6, 1918. The Bank of the Philippine Islands, authorized by law to issue notes, put into circulation notes of

the same size as those of the Government, of the denominations of 5, 10, 25, 50, 100, and 200 pesos. The Philippine National Bank, created by Act No. 2612, issued under the authority conferred upon it by section 18 of said Act, first, 2, 5, and 10-peso notes, and subsequently also 1-peso notes. During a subsidiary coin crisis caused by the war, the National Bank took advantage of the privilege granted to it by Act No. 2612 and issued emergency notes of 10, 20, and 50 centavos and 1 peso. These were not engraved in the United States, but by the Bureau of Printing of the Philippine Government, and were issued in sizes different from those of the Government notes: the 10, 20, and 50-centavo bills measured 6 by 11½ centimeters and the 1-peso bills, 6 by 12.8 centimeters. The National Bank issued altogether, during the period from August 5, 1916, to December 6, 1918, notes to the value of ₱6,900,000, of which ₱2,492,640.35 were withdrawn from circulation, which left ₱4,407,359.65 outstanding. Of course, a considerable portion of the emergency notes will never have to be withdrawn from circulation, because owing to the brittle nature of the paper, they have gone to pieces, which means so much money gained for the bank.

The 1-peso and 50, 20, and 10-centavo coins bear on one side a woman standing, striking an anvil to her right with a hammer held in her right hand, with Mayon volcano, emitting smoke, in the background to the left. The 5, 1, and ½-centavo coins bear another allegorical representation: a muscular working man, with the forearm resting on an anvil and a hammer in the right hand, half resting, as if about to rise, and contemplating the horizon, at which the smoking volcano of Mayon is visible. These two allegorical representations are the work of the eminent Filipino engraver, Melecio Figueroa. The 2-peso notes, which are the bills most in circulation among the popular masses, bear the bust of Dr. Rizal in a medallion, and the 1-peso bills the bust, without medallion, of Apolinario Mabini, one of the most conspicuous Filipinos of the insurrection of 1898 and 1899.

Table 4, which gives the currency circulation from 1906 to 1918, shows that the money in circulation in the year ending December 31, 1918, amounted to ₱131,151,883 as compared with ₱30,030,411, the circulation in the year 1906, or an increase of ₱101,121,472, and that the increase in the money in circulation began in the years 1912 and 1913.

As aforesaid, the circulation at the end of the year 1918 was ₱131,151,883, which, compared with ₱102,580,313 for the pre-

vious year, gives an increase of ₱28,571,169 in a year, and compared with ₱51,284,967 for 1915, gives an increase of ₱79,866,977 in three years. Based on the population as shown in the Census of 1918, the circulation per capita was ₱12.572 on December 31, 1918, while on the same date of former years it was ₱17.36 in 1917, ₱6.94 in 1916, and ₱5.40 in 1915.

NOTE.—The supervision of banking institutions and building and loan associations in the Philippine Islands is under the jurisdiction of the Insular Treasurer, as per Act No. 2711, section 8, chapter 41. (NOTA.—La supervisión de las instituciones bancarias y asociaciones de construcción y préstamos está bajo la jurisdicción del Tesorero Insular, como lo dispone el artículo 8, capítulo 41, de la Ley No. 2711.)

After the Census Day, two big American banking institutions, the head offices of which are in New York City, opened branches in Manila in order to enter commercial activities in the Islands, and the China Banking Corporation was organized under the local laws.

Después del Día del Censo, dos grandes instituciones bancarias americanas, cuyos oficinas centrales están en la Ciudad de Nueva York, abrieron sucursales en Manila con objeto de entrar en actividades mercantiles en estas Islas, y la China Banking Corporation se incorporó bajo las leyes locales.

INSURANCE COMPANIES.

INSURANCE COMPANIES.

Fifty-nine insurance companies of different denominations were doing business in the Philippines in 1918. Including the work animal insurance provided for by Act No. 2573, the total number of insurance corporations was sixty. Of these companies, including the animal insurance organization, nine were more or less local, while twelve were domiciled in the United States and the remainder in various foreign cities, mainly London. Of the companies mentioned, fourteen were fire; five, marine; fifteen, fire and marine; eleven, fire, marine and other risks; five, life; two, life and accident, and seven, automobile, motor vehicle, etc., insurance companies. Table *1* gives their names, kind of operations, and domiciles. Table 2 shows the kind of business carried on by insurance companies in the years 1915 and 1916, the amount of the policies, and the average of the premiums collected.

In 1917 there were thirty-six fire, twenty-five marine, nine life, and fourteen miscellaneous insurance companies. The delays and interruptions in the postal service incidental to the war, and the fact that the foreign insurance companies had not submitted their annual statements, rendered it impracticable for the time being to compile complete statistics on the insurance business carried on in the Philippines. One hundred and sixty-five licenses were issued in 1917 to insurance agents.

After July 1, 1915, the date when the Insurance Law, Act No. 2427, took effect, the official registration began to acquire more system, because on that date the Insular Treasurer commenced to act as ex-officio Insurance Commissioner. Formerly the initial papers had to be filed with the Division of Archives of the Executive Bureau, pursuant to sections 6 and 68 of the Corporation Law, Act No. 1459, of April 1, 1906. Prior to that date, not even the mercantile register provided for by section 66 of the Code of Commerce was a reliable source of information. The data published in the Census of 1903, although not official, could be used for that purpose.

Sixty-four marine and fire insurance companies, all foreign, were operating in the Philippines when the Census of 1903 was

taken, and five life insurance companies, also foreign, had agents in Manila. The risks accepted by the insurance companies in 1902 were rather limited. There was but one so-called "fire insurance association," formed by agents of various insurance companies, who used to pass upon insurance agreements in a rather casuistic manner, owing to the uncertain state of affairs then prevailing. The companies licensed in 1918, however, were not only autonomous and had regular rate schedules and more fixed conditions, but were doing business with comparative security, in view of the progress attained in the construction of warehouses and residence buildings, the establishment of fire limits, and the efficiency of the trained fire departments. The very increment of the mercantile and industrial movement required that the products stored in Manila and the provinces be properly protected, and real estate mortgages usually contain a clause requiring the mortgagor to insure the same in favor of the bank or other creditor.

TABLE No. 1.—*Fire, marine and miscellaneous insurance companies doing active business in the Philippine Islands, during the census year ending December 31, 1918.*[1]

TABLA No. 1.—Compañías de seguros contra incendios, marítimos y de seguros varios, que hacían negocio activo en las Islas Filipinas durante el año censal que finalizó el 31 de diciembre de 1918.
